(54) Title: ORALLY ACTIVE ADENOSINE KINASE INHIBITORS

## (57) Abstract

This invention relates to adenosine kinase inhibitors and to nucleoside analogs, specifically to orally active, substituted 5-aryl pyrrolo[2,3-d] pyrimidine and 3-aryl pyrazolo[3,4-d] pyrimidine nucleoside analogs having activity as adenosine kinase inhibitors. The invention also relates to the preparation and use of these and other adenosine kinase inhibitors in the treatment of cardiovascular and cerebrovascular diseases, inflammation and other diseases which can be regulated by increasing the local concentration of adenosine.

**ORALLY ACTIVE ADENOSINE KINASE INHIBITORS**

This invention relates to adenosine kinase inhibitors and to nucleoside analogs, specifically to orally active, substituted 5-aryl pyrrolo[2,3-d]pyrimidine and 3-aryl pyrazolo[3,4-d] pyrimidine nucleoside analogs having activity as adenosine kinase inhibitors. The invention also relates to the preparation and use of these and other 5 adenosine kinase inhibitors in the treatment of cardiovascular and cerebrovascular diseases, inflammation and other diseases which can be regulated by increasing the local concentration of adenosine.

This application is a continuation in part of Serial No. 07/812,916, filed December 23, 1991, which is a continuation-in-part of Serial No. 07/647,117, filed 10 January 23, 1991, which is a continuation-in-part of Serial No. 466,979, filed January 18, 1990; which is a continuation-in-part of Serial No. 408,707, filed September 15, 1989. The disclosures of these applications are incorporated herein by reference.

BACKGROUND OF THE INVENTION

Adenosine is an endogenously produced molecule that plays a major role in a variety of important cellular processes. It is a vasodilator, can inhibit immune function, enhance activation of mast cells (associated with allergic reactions), inhibit neutrophil oxygen free-radical production, is antiarrhythmic, and is an inhibitory 5 neurotransmitter. Adenosine is phosphorylated to adenosine triphosphate (ATP) which is used by all cells to store energy for use in future energy-utilizing metabolic reactions or mechanical work (e.g. muscle contraction). Extracellular adenosine, frequently produced by breakdown of intracellular ATP pools, evokes a variety of pharmacological responses through activation of extracellular adenosine receptors located on the 10 surface of nearly all cells. For example, adenosine produces a variety of cardiovascular related effects including vasodilation, inhibition of platelet aggregation, and negative inotropic, chronotropic and dromotropic effects on the heart. Adenosine also has effects within the central nervous system (CNS) including inhibition of neurotransmitter release from presynaptic neurons and inhibition of post-synaptic neuron firing in brain and the 15 spinal cord and at sites of inflammation, such as inhibition of neutrophil adhesion to endothelial cells and inhibition of neutrophil oxygen free-radical production.

Compounds that increase extracellular adenosine can be beneficial to living organisms, particularly under certain conditions. For example, compounds that increase adenosine levels have been associated with the treatment of ischemic 20 conditions such as stroke, as well as other conditions benefitted by enhanced adenosine levels, such as inflammation, arthritis, seizures, epilepsy and other neurological conditions. The compounds are also useful for treating pain, as muscle relaxants, and for inducing sleep.

Adenosine kinase is a cytosolic enzyme which catalyzes the 25 phosphorylation of adenosine to AMP. Inhibition of adenosine kinase can potentially reduce the ability of the cell to utilize adenosine, leading to increased adenosine outside of the cell where it is pharmacologically active. However, the regulation of adenosine concentration is complex and involves other adenosine-metabolizing enzymes each with different kinetic properties and mechanisms of regulation. Adenosine can also be 30 deaminated to inosine by adenosine deaminase (ADA) and condensed with L-homocysteine to S-adenosylhomocysteine (SAH) by SAH hydrolase. The role of each

of these enzymes in modulating adenosin concentration is dependent on the prevailing physiological conditions, is tissue specific and is not well understood.

A number of nucleosides including pyrrolo[2,3-d]pyrimidine and pyrazolo[3,4-d]pyrimidine analogs have been evaluated for inhibition of adenosine kinase but were reported to have K<sub>i</sub>'s of greater than 800 nM. Caldwell and Henderson, 5 Cancer Chemother. Rep., 2:237-46 (1971); Miller et al., J. Biol. Chem., 254:2346-52 (1979). A few compounds have been reported as potent inhibitors of adenosine kinase with K<sub>i</sub>'s of less than 100 nM. These are the purine nucleosides; 5'-amino-5'-deoxyadenosine (Miller et al.) and 1,12-bis(adenosin-N<sup>6</sup>-yl)dodecane (Prescott et al., Nucleosides & Nucleotides, 8:297 (1989)); and the pyrrolopyrimidine nucleosides, 10 5-iodotubercidin (Henderson et al., Cancer Chemotherapy Rep. Part 2, 3:71-85 (1972); Bontemps et al., Proc. Natl. Acad. Sci. USA, 80:2829-33 (1983); Davies et al., Biochem. Pharmacol., 35:3021-29 (1986)) and 5'-deoxy-5-iodotubercidin (Davies et al., Biochem. Pharmacol., 33:347-55 (1984) and 35:3021-29 (1986)).

Some of these compounds have been used to evaluate whether adenosine kinase inhibition might lead to increased extracellular adenosine concentrations. In rat 15 cardiomyocytes, inhibition of adenosine deaminase by 2'-deoxycoformycin was reported to have no effect on adenosine release from the cells. In contrast, inhibition of ADA together with adenosine kinase by 5'-amino-5'-deoxyadenosine resulted in a 6-fold increase in adenosine release. Zoref-Shani et al., J. Mol. Cell. Cardiol., 20:23-33 20 (1988). The effects of the adenosine kinase inhibitor alone were not reported. Similar results were reported in isolated guinea pig hearts; in these studies addition of 5'-amino-5'-deoxyadenosine to the perfusion medium, in the presence of EHNA to inhibit deamination, was reported to result in a 15-fold increase of adenosine release. Schrader in Regulatory Function of Adenosine; (Berne et al.) eds. pp. 133-156 (1983). 25 These effects were not apparent in the absence of ADA inhibition, and other studies using isolated rat hearts perfused with 5-iodotubercidin alone, have reported no increase in perfusate adenosine concentration under normoxic conditions Newby et al., Biochem. J., 214:317-323 (1983), or under hypoxic, anoxic or ischemic conditions, Achtenberg et al., Biochem. J., 235:13-17 (1986). In other studies, adenosine release 30 has been measured in neuroblastoma cells in culture and compared with that of a variant deficient in adenosine kinase (AK<sup>-</sup>). The AK<sup>-</sup> cells used in this study were said

to release adenosine at an accelerated rate; the concentration of adenosine in the growth medium was reported to be elevated compared to the normal cells. Green, J. Supramol. Structure, 13:175-182 (1980). In rat and guinea pig brain slices, adenosine uptake was reportedly inhibited by the adenosine kinase inhibitors, 5-iodotubercidin and 5'-deoxy-5-iodotubercidin. Davis et al., Biochem. Pharmacol., 33:347-55 (1984).

5 However, inhibition of uptake and intracellular trapping via phosphorylation does not necessarily result in increased extracellular adenosine, since the adenosine could enter other metabolic pathways or the percentage of adenosine being phosphorylated could be insignificant compared to the total adenosine removed.

The effects of adenosine and certain inhibitors of adenosine catabolism, 10 including 5-iodotubercidin were evaluated in an experimental model in which dog hearts were subjected to ischemia and reperfusion; 5-iodotubercidin was reported to have inconsistent effects. Wu, et al., Cytobios, 50:7-12 (1987).

Although the adenosine kinase inhibitors, 5'-amino-5'-deoxyadenosine and 5-iodotubercidin have been widely used in experimental models, the susceptibility of 5'- 15 amino-5'-deoxyadenosine to deamination, and hence its potentially short half life, and the cytotoxicity of 5-iodotubercidin make their clinical utility limited and may limit interpretations based on these compounds. The known pyrrolo[2,3-d]pyrimidines, 5-iodotubercidin and 5'-deoxy-5-iodotubercidin have been reported to cause pronounced general flaccidity and much-reduced spontaneous locomotor activity in mice, interpreted 20 to be skeletal muscle relaxation; to cause hypothermia in mice; and to decrease blood pressure and heart rate in anesthetized rats. Daves et al., Biochem. Pharmacol., 33:347-55 (1984) and 35:3021-29 (1986); and U.S. Patent No. 4,455,420. The skeletal muscle effects of these compounds have been poorly documented, while the other effects were considered significant toxicities.

25 More recent references concerned with the mechanisms and effects of adenosine kinase inhibitors are Keil et al., Life Sciences 51:171-76 (1992); Zhang et al., J. Pharmacol. Exper. Ther. 264(3): 1415 (1993); Phyllis et al., Life Sciences, 53: 497-502 (1993); Sciotti et al., J. Cerebral Blood Flow Metab., 13:201-207 (1993); Pak et al., Soc. for Neuroscience Abs., 20: 149.2 (1994); White, Soc. Neurosci. Abs., 20:308.9 (1994); 30 and Firestein et al., J. Immunology 154:326-34 (1995). These publications in general show that adenosine kinase inhibitors, as a class, have a role in brain functions, and

show promise in connection with the treatment of neurological conditions such as seizures. One reference, Phillis et al., indicates that the known adenosine kinase inhibitor 5-iodotubercidin apparently does not protect against ischemic cerebral injury. Keil et al. disclose that adenosine kinase plays a key role in the mediation of nervous system responses to stimulus, particularly pain (antinociception), but notes that the 5 control of endogenous adenosine concentrations by such means is a complex process requiring further study.

Thus, there is a need for selective, potent, and bioavailable adenosine kinase inhibitors with a useful half-life, i.e. compounds which can be exploited to beneficially influence or control endogenous adenosine kinase activity, and therefore, 10 extracellular adenosine levels. The compounds of the invention are suitable adenosine kinase inhibitors having these characteristics.

#### SUMMARY OF THE INVENTION

The invention is directed to novel pyrrolo[2,3-d] pyrimidine and pyrazolo[3,4-d] pyrimidine nucleoside analogs. Preferred compounds are 4-amino 15 pyrrolo[2,3-d] pyrimidine analogs that have an aryl substituent at either or both the 4-amino group or the 5-position. Also preferred are 4-amino pyrazolo[3,4-d] pyrimidine analogs that have any aryl substituent at either or both the 4-amino group or the 3-position. Most preferred are the diaryl compounds, having an aryl group at both 20 positions, particularly those where at least one aryl group is a substituted phenyl. It has been discovered that these compounds are highly selective adenosine kinase inhibitors with oral bioavailability and oral efficacy significantly higher than other known known adenosine kinase inhibitors. The compounds are also nontoxic, particularly in connection with liver function.

The invention concerns the compounds themselves, the preparation of 25 these compounds, and their in vitro and in vivo adenosine kinase inhibition activity of these compounds. Another aspect of the invention is directed to the clinical use of the compounds to increase adenosine concentrations in biological systems. For example, in vivo inhibition of adenosine kinase prevents phosphorylation of adenosine resulting in higher local concentrations of endogenous adenosine.

The compounds of the invention possess advantages for pharmaceutical uses such as enhanced pharmacological selectivity, efficacy, bioavailability, ease of manufacture and compound stability.

The compounds of the invention may be used clinically to treat medical conditions where an increased localized adenosine concentration is beneficial.

5 Accordingly, the invention is directed to the treatment of ischemic conditions such as stroke, as well as other conditions benefitted by enhanced adenosine levels, such as inflammation, arthritis, seizures, epilepsy and other neurological conditions. The compounds are also useful for treating pain, as muscle relaxants, and for inducing sleep.

10 The invention is also directed to prodrugs and pharmaceutically acceptable salts of the compounds described, and to pharmaceutical compositions suitable for different routes of drug administration and which comprise a therapeutically effective amount of a described compound admixed with a pharmaceutically acceptable carrier.

15 **Definitions**

The following terms generally have the following meanings.

The term "aryl" refers to aromatic groups, which have at least one ring having a conjugated pi electron system, including for example carbocyclic aryl, heterocyclic aryl and biaryl groups, all of which may be optionally substituted.

20 Carbocyclic aryl groups are groups wherein all the ring atoms on the aromatic ring are carbon atoms, such as phenyl. Also included are optionally substituted phenyl groups, being preferably phenyl or phenyl substituted by one to three substituents, preferably lower alkyl, hydroxy, lower alkoxy, lower alkanoyloxy, halogen, cyano, perhalo lower alkyl, lower acylamino, lower alkoxycarbonyl, amino, alkylamino, carboxamido, and 25 sulfonamido.

Heterocyclic aryl groups are groups having from 1 to 3 heteroatoms as ring atoms in the aromatic ring and the remainder of the ring atoms carbon atoms. Suitable heteroatoms include oxygen, sulfur, and nitrogen. Heterocyclic aryl groups include furanyl, thienyl, pyridyl, pyrrolyl, pyrimidyl, pyrazinyl, imidazolyl, and the like, all 30 optionally substituted. Also included are phenyl rings fused with a five or six membered heterocycle containing one or more heteroatoms such as oxygen, sulfur, and nitrogen.

Optionally substituted furanyl represents 2- or 3-furanyl or 2- or 3-furanyl preferably substituted by lower alkyl or halogen. Optionally substituted pyridyl represents 2-, 3- or 4-pyridyl or 2-, 3- or 4-pyridyl preferably substituted by lower alkyl or halogen. Optionally substituted thienyl represents 2- or 3-thienyl, or 2- or 3-thienyl preferably substituted by lower alkyl or halogen.

5 The term "biaryl" represents phenyl substituted by carbocyclic aryl or heterocyclic aryl as defined herein, ortho, meta or para to the point of attachment of the phenyl ring, advantageously para; biaryl is also represented as  $-C_6H_4-Ar$  where Ar is aryl.

The term "aralkyl" refers to an alkyl group substituted with an aryl group.

10 Suitable aralkyl groups include benzyl, picolyl, and may be optionally substituted.

The term "lower" referred to herein in connection with organic radicals or compounds respectively defines such with up to and including 7, preferably up to and including 4 and advantageously one or two carbon atoms. Such groups may be straight chain or branched.

15 The terms (a) "alkyl amino", (b) "arylamino", and (c) "aralkylamino", respectively, refer to the groups  $-NRR'$  wherein respectively, (a) R is alkyl and R' is hydrogen, aryl or alkyl; (b) R is aryl and R' is hydrogen or aryl, and (c) R is aralkyl and R' is hydrogen or aralkyl.

The term "acylamino" refers to  $RC(O)NR'$ .

20 The term "carbonyl" refers to  $-C(O)-$ .

The term "carboxamide" or "carboxamido" refers to  $-CONR_2$  wherein each R is independently hydrogen, lower alkyl or lower aryl.

25 The term "alkyl" refers to saturated aliphatic groups including straight-chain, branched chain and cyclic groups, optionally containing one or more heteroatoms.

The term "alkenyl" refers to unsaturated alkyl groups which contain at least one carbon-carbon double bond and includes straight-chain, branched or cyclic groups optionally containing one or more heteroatoms.

30 The term "alkynyl" refers to unsaturated alkyl groups which contain at least one carbon-carbon triple bond and includes straight-chain, branched or cyclic groups, optionally containing one or more heteroatoms.

The term "mercapto" refers to SH or a tautomeric form thereof.

The term "alkylene" refers to a divalent straight chain or branched chain saturated aliphatic radical.

The term "sulfonamido" means  $-\text{SO}_2\text{NHR}$  where R is hydrogen or lower alkyl.

The term "N-sulfonyl amine" means  $-\text{NHSO}_2\text{R}$  where R is fluoro, lower 5 perfluoroalkyl or lower alkyl.

The term "N-acylated sulfonamide" refers to the group  $-\text{SO}_2\text{NHCOR}$  where R is lower alkyl or lower perfluoroalkyl.

The term "guanidino" refers to the group  $-\text{NR}_1\text{C}(\text{NR}_2)\text{NR}_3\text{R}_4$  where R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl or aryl groups.

10 The term "aminoguanidino" refers to the group  $-\text{NR}_1\text{NR}_2\text{C}(\text{NR}_3)\text{NR}_4\text{R}_5$  where R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub> and R<sub>5</sub> are independently hydrogen, alkyl or aryl groups.

The term "ureido" refers to the group  $-\text{NR}_1\text{C}(\text{O})\text{NR}_2\text{R}_3$  where R<sub>1</sub>, R<sub>2</sub> and R<sub>3</sub> are independently hydrogen, alkyl or aryl groups.

The term "carboxylic acid" refers to the group  $-\text{COOH}$ .

15 The term "acylguanidino" refers to the group  $-\text{CONR}_1\text{C}(\text{NR}_2)\text{NR}_3\text{R}_4$  where R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl or aryl groups.

The term "basic nitrogen" generally refers to the nitrogen atom of an alkyl amine and implies a compound whose conjugated acid in aqueous solution has a pKa in the range of 9 to 11.

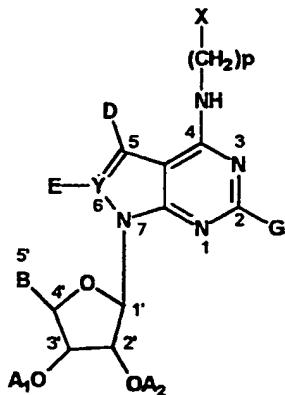

20 The term "prodrug" refers to any compound that, when administered to a biological system generates the "drug" substance either as a result of spontaneous chemical reaction or by enzyme catalyzed or metabolic reaction. Reference is made to various prodrugs such as acyl esters, carbonates, and urethanes, included herein as examples. The groups illustrated are exemplary, not exhaustive and one skilled in the 25 art could prepare other known varieties of prodrugs. Such prodrugs of the compounds of the invention, fall within the scope of the invention.

The term "pharmaceutically acceptable salt" includes salts of compounds described herein derived from the combination of a compound of this invention and an organic or inorganic acid. The compounds of the present invention are useful in both 30 free base and salt form. In practice the use of salt form amounts to use of base form; both forms are within the scope of the present invention.

The term treatment includes prophylactic or therapeutic administration of compounds of the invention, for the cure or amelioration of disease or symptoms associated with disease, and includes any benefit obtained or derived from the administration of the described compounds.

DETAILED DESCRIPTION OF THE INVENTION

5 The invention relates to adenosine kinase inhibitors of the general Formula I.

Formula 1

wherein:

A<sub>1</sub> and A<sub>2</sub> are each independently hydrogen, acyl, or taken together form a cyclic carbonate;

10 B is CH<sub>3</sub>, alkenyl, or (CH<sub>2</sub>)<sub>n</sub>-B', where n is from 1 to 4 and B' is hydrogen, hydroxy, alkyl, alkoxy, amino, azido, or halogen;

D is halogen, aryl, aralkyl, alkyl, alkenyl, alkynyl, optionally containing one or more heteroatoms such as N and/or O, haloalkyl, cyano, or carboxamido;

Y is carbon or nitrogen;

15 E is nothing when Y is nitrogen, and is hydrogen, halogen or alkyl when Y is carbon;

G is hydrogen or halogen;

p is from 0 to 3, preferably 0;

and X is a five or six member aryl ring, optionally substituted at any one or more

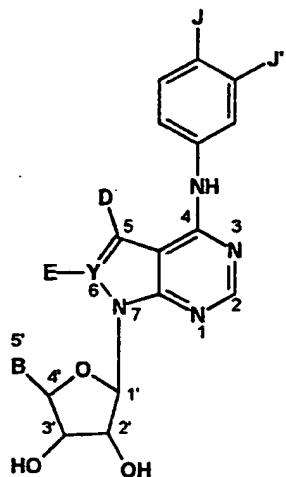

20 positions by hydroxy, alkoxy, perhalo lower alkyl, sulfonamide, halogen, cyano, carboxamido, acylamino, NRR', or SR where R and R' are independently hydrogen or lower alkyl.

For convenience, the numbering scheme in Formula 1 is given for pyrrolo pyrimidine compounds (Y=C). It will be understood that the nomenclature and numbering scheme is different for the pyrazolo pyrimidine (Y=N) embodiments of the invention.

These compounds are potent adenosine kinase inhibitors, are superior in 5 oral availability, and are suitably non-toxic.

Preferably, X is a six member ring (phenyl), the most preferred substitution is at the para position, and the most preferred substituent is halogen (e.g., fluorine). In theory, substitution of the ring structure as described, particularly at the para position of the phenylamino group (i.e. 4N-4-substituted phenylamino), blocks certain oxidation 10 or glucoronidation sites, which in turn increases the half-life of the compound by reducing the rate of *in vivo* elimination after oral administration. The result is a more effective and longer-lasting compound when administered orally.

Also preferred are embodiments where A<sub>1</sub> and A<sub>2</sub> are hydrogen; and B is CH<sub>2</sub>OH, or most preferably is CH<sub>3</sub>. D is preferably aryl, and most preferably is phenyl 15 or substituted phenyl. E is nothing when Y is nitrogen, and is preferably hydrogen when Y is carbon. G is also preferably hydrogen. Thus, preferred compounds can be represented by Formula 2:

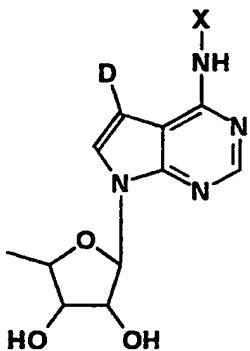

Formula 2

wherein

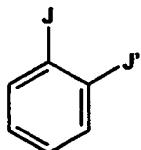

- B is  $\text{CH}_2\text{OH}$ , or most preferably  $\text{CH}_3$ ;
- D is as defined in Formula I, or preferably is aryl, phenyl, or substituted phenyl;
- E is halogen, alkyl, or most preferably hydrogen;
- Y is carbon or nitrogen, preferably carbon;
- 5 and J and J' are independently halogen, preferably fluorine.

In another embodiment, preferred compounds are those of Formula 3

Formula 3

where D and X are each independently a substituted phenyl, such as

10 where J and J' are each independently halogen or cyano, preferably fluorine.

Prodrugs of the compounds of the present invention are included in the scope of this application. Such prodrugs may be prepared by esterification of the hydroxyl groups on the sugar moiety. Specially preferred will be the ester derivatives that improve water solubility or oral bioavailability.

15 Further, the compounds of the present invention contain asymmetric carbon atoms and hence can exist as stereoisomers, both enantiomers and diastereomers. The individual preferred stereoisomers and mixtures thereof are considered to fall within the scope of the present invention. The compounds described

by Formula 1 may contain a 5-modified 1- $\beta$ -D-ribofuranosyl group and that isomer comprises a particularly preferred diastereomeric and enantiomeric form for compounds of the present invention. Thus, the corresponding lyxofuranosyl form of these compounds are within the scope of the invention. It is also evident that in addition to the sugar moiety, additional asymmetric carbons may be present in compounds of the 5 present invention, being present in moieties A<sub>1</sub>, A<sub>2</sub> or B, or in the substituted heterocyclic pyrrolo[2,3-d] pyrimidine or pyrazolo[3,4-d] pyrimidine ring. In this event, both of the resulting diastereomers are considered to fall within the scope of the present invention.

#### SYNTHESIS OF ADENOSINE KINASE INHIBITORS

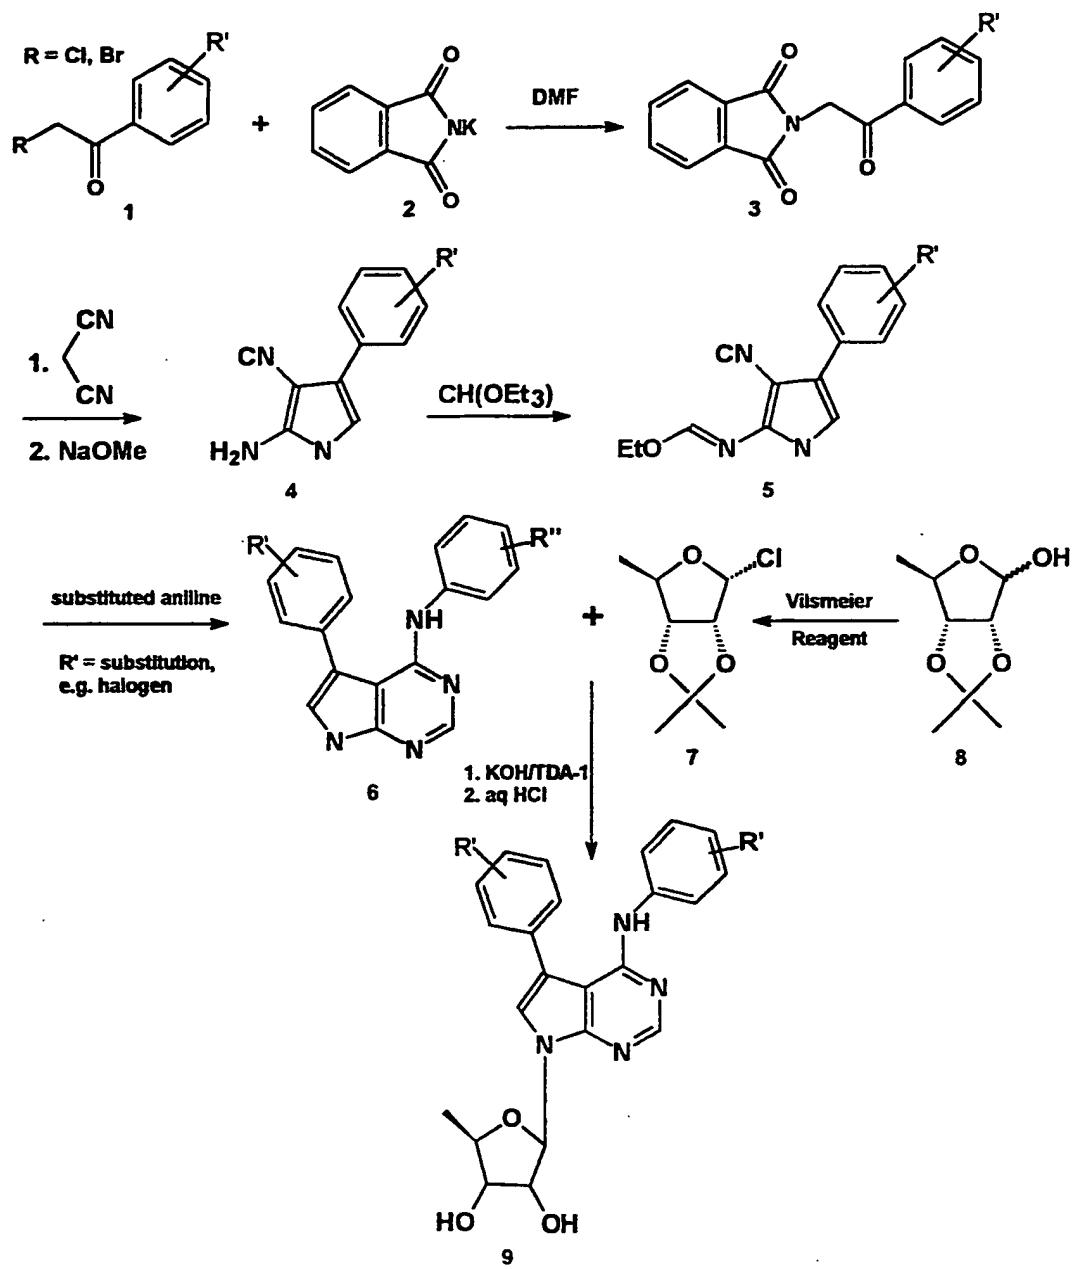

10 The compounds of the invention can be made by several reaction schemes, and for convenience can be grouped as pyrrolo or pyrazolo pyrimidines. Exemplary synthetic routes are given below.

#### SYNTHESIS OF PYRROLO PYRIMIDINES

##### EXAMPLE 1

##### PREFERRED PREPARATION OF PYRROLO PYRIMIDINES

15 Phenylated compounds of the invention can be made according to Scheme 1, below. A heterocycle, 5-aryl-4-arylamino[2,3-d]pyrimidine (6) is made by condensing a substituted phenacyl chloride or bromide (1) with potassium phthalimide (2) in a solvent such as N,N-dimethylformamide or acetonitrile at ambient temperature to obtain the phenacylphthalimide (3). This is further 20 condensed with malononitrile in the presence of sodium methoxide to provide the desired 2-amino-3-cyano-4-phenylpyrrole (4). Refluxing (4) with triethylorthoformate provides the intermediate (5) which upon condensation with substituted anilines yields the desired heterocycle (6).

SCHEME 1

Desired 5-substituted-5-deoxy ribose analogs are prepared by tosylation of a suitably protected ribose, displacing the tosylate with an appropriate nucleophile, such as hydride or azide, and subsequent manipulation of the protecting groups. Snyder, J.; Serianni, A.; Carbohydrate Research, 163:169 (1987). The sugar, 1-alpha-chloro-5-deoxy-2,3-isopropylidene-D-ribofuranose (7) used in this process is made by 5 reacting the corresponding sugar (8) with Vilsmeier reagent (DMF and oxalylichloride) at 0°C. It is further condensed with the heterocycle (6) in the presence of KOH and a phase transfer catalyst such as TDA-1 at ambient temperature. Rosemeyer H., and Seela, F, Helvetica Chimica Acta, 71:1573 (1988). The resulting protected nucleoside is subjected to deprotection under acidic conditions to obtain compound (9).

10

The following compounds were made by this procedure.

- #1) 4-N-(4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.
- #2) 4-N-(4-fluorophenyl)amino-5-(4-fluorophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- 15 #3) 4-N-(4-chlorophenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- #4) 4-phenylamino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.

20

The following compounds can also be synthesized in this way.

- #5) 4-N-(4-bromophenyl)amino-5-(phenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- #6) 4-N-(3,4-dichlorophenyl)amino-5-(phenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- 25 #7) 4-N-(3,5-dichlorophenyl)amino-5-(phenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- #8) 4-N-(3-chloro-4-fluorophenyl)amino-5-(phenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- #9) 4-N-(4-fluorophenyl)amino-5-(4-chlorophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.

#10) 4-N-(3,5-difluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.

#11) 4-N-(3,4-difluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.

5 #12) 4-N-(4-chlorophenyl)amino-5-(4-chlorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl) pyrrolo[2,3-d]pyrimidine.

Examples according to this reaction scheme follow.

EXAMPLE 2 DIARYL PYRROLOPYRIMIDINE NUCLEOSIDES

A. 2-Amino-3-cyano-4-phenylpyrrole, (4).

To a solution of phenacyl chloride (1) (500 g, 3.23 M) in dry N,N-dimethylformamide (600 mL) was added potassium phthalimide, 2 (600 g, 3.23 M) in small portions. The resulting mixture was stirred at ambient temperature overnight. To this was added malononitrile (256 g, 3.88 M) in one lot followed by a 25 wt % solution of sodium methoxide in methanol (744 mL, 3.2 mol). The resulting mixture was stirred at room temperature overnight. Ice-water (10.0 L) was added to the reaction mixture 15 and stirring was continued at room temperature overnight. The precipitate formed was collected by filtration and washed with cold water (4.0 L). The off-white solid was stirred in toluene (3.0 L) and filtered. The solid was washed with toluene (300 mL) and dried under vacuum at 60 °C overnight. Yield 298.56 g. m.p. 172-174 °C.

20 B. 5-Phenyl-4-(4-fluorophenyl)aminopyrrolo[2,3-d]pyrimidine, (6)

A mixture of compound (4) (296.0 g, 1.62 mol) and triethylorthoformate (3.2 L) was refluxed for 1 h. The triethylorthoformate was distilled off under reduced pressure until the pot temperature reached 88 °C. To the cooled reaction mixture hexane (3.0 L) was added with vigorous stirring. The contents of the vessel were cooled 25 to 0 °C and the off-white solid formed was collected by filtration and washed with hexane (2x500 mL) and dried under suction. Final drying was done in a high vacuum oven. Yield of the 2-ethoxymethyleneimino-3-cyano-4-phenylpyrrole (5) was 323.0 g (83%). m.p. 98-100 °C.

The above material (100 g, 0.42 mol) was dissolved in 1,2-dichlorobenzene. 4-Fluoraniline (60 mL, 0.62 mol) was added and the reaction mixture

was heated to 125 °C for 1 h. An additional 985 mL of 1,2-dichlorobenzene was added and the reaction temperature was raised to 140 °C for 3 h. Upon cooling to 0 °C the title compound precipitated as a yellow solid which was collected by filtration and dried under vacuum. Yield was 66.0 g. of the title compound, m.p. 215- 218 °C.

**C. 5-(4-Fluorophenyl)-4-N-(4-fluorophenyl)aminopyrrolo[2,3-d] pyrimidine**

5 This compound was made by a route similar to Examples 2A and 2B. Here, the phenacyl chloride was replaced with 4-fluorophenacyl chloride. m.p. 245-248 °C.

**D. 5-phenyl-4-N-(4-chlorophenyl)aminopyrrolo[2,3-d] pyrimidine**

10 This compound was made by a route similar to Example 2B. Here, the 4-fluoroaniline was replaced with 4-chloroaniline. m.p. 233-236 °C.

**E. 5-phenyl-4-N-phenylaminopyrrolo[2,3-d] pyrimidine**

This compound was made by a route similar to Example 2B. Here, the 4-fluoroaniline aniline was replaced with aniline. m.p. 210-215 °C.

**F. 4-N-(4-Carbethoxymethylphenyl)amino-5-phenylpyrrolo[2,3-d]pyrimidine**

15 This compound was made by a procedure similar to the one described for 4-N-(4-fluorophenyl)amino-5-phenylpyrrolo[2,3-d]pyrimidine except that 4-fluoroaniline was replaced with ethyl 4-aminophenylacetate. m.p. 180-183 °C.

**G. Synthesis of 4-N-(4-Iodophenyl)amino-5-phenylpyrrolo[2,3-d]pyrimidine**

20 This compound was made by a procedure similar to the one described for 4-N-(4-fluorophenyl)amino-5-phenylpyrrolo[2,3-d]pyrimidine except that 4-fluoroaniline was replaced with 4-iodoaniline. m.p. 239-240 °C.

**H. 6-Bromo-5-phenyl-4-N-phenylaminopyrrolo[2,3-d]pyrimidine**

25 5-phenyl-4-phenylaminopyrrolo[2,3-d]pyrimidine (1.5g) was dissolved in dry DMF (25.0 mL) and treated with N-bromosuccinamide (1.8 g). Stirring was continued for 18 h and the solvent was evaporated. The residue was treated with water (10 mL) and the solid was collected by filtration. Crystallization from boiling ethanol

provided the title compound. Yield 1.6g. m.p. 240-249 °C. Rf=0.6, SiO<sub>2</sub>, 4:1 Ethyl acetate:hexane.

I. 6-Bromo-4-N-(4-fluorophenyl)amino-4-phenylpyrrolo[2,3-d]pyrimidine

The compound was made by a procedure similar to the one above. m.p. >250 °C. Rf=0.6, SiO<sub>2</sub>, 4:1 Ethyl acetate:hexane.

5 EXAMPLE 3

GLYCOSYLATION OF PYRROLOPYRIMIDINE HETEROCYCLES

The procedure described here for the glycosylation of 4-N-(4-fluorophenyl)amino-5-phenylpyrrolo[2,3-d]pyrimidine exemplifies a general method of glycosylation for the pyrrolopyrimidine heterocycles.

Into a one liter three neck flask fitted with a thermometer, an addition 10 funnel and a mechanical stirrer, was taken a mixture of toluene (290 mL), acetonitrile (100 mL), and N,N-dimethylformamide (100mL). Oxalyl chloride (28.6 mL, 328 mmol) was added dropwise to the reaction mixture through the addition funnel. After the addition was completed the mixture was stirred at room temperature for 15 min and the cooled to -12 °C. A solution of 5-deoxy-2,3-isopropylidene-D-ribofuranose (57.2 g, 328 15 mmol) in toluene (58 mL) was cooled to -12 °C and added to the reaction mixture through the addition funnel at such a rate that the reaction temperature remained at -12 °C. After the addition was completed the reaction mixture was stirred at -12 °C for 20 min. The chloro sugar solution thus formed was canulated into an ice-cooled solution of triethylamine (58 mL) in toluene (145 mL). After stirring for 15 min the reaction 20 mixture was filtered and the solid was washed with toluene (2x50 ml) and the filtrate was kept in an ice bath.

A 2 liter three neck flask equipped with a mechanical stirrer and an addition funnel was charged with the heterocycle, e.g. compound (6) (50 g, 164 mmol), freshly powdered KOH (21.7 g, 328 mmol) and toluene (430 mL). To the well stirred 25 mixture was added TDA-1 catalyst (53.0 mL) and stirring was continued for 15 min. The above solution of the chloro sugar was added, and the mixture was stirred over-night at room temperature. The dark reaction mixture was washed with water (500 mL), brine (200 mL) and the organic phase was concentrated in vacuum to give a dark oil. This product was dissolved in methanol (450 mL) and the resulting solution was diluted with 30 200 mL of 1 N HCl. The reaction temperature was raised to 64-65 °C for 6.5 h under

vigorous stirring and then cooled to 25 °C. The acid was neutralized to pH ~7-8 using NaHCO<sub>3</sub> solution. The reaction mixture was diluted with water (200 mL) and the precipitate that formed was collected by filtration, washed with water (2x100 mL) and dried under suction. The wet solid was crystallized from boiling ethanol. Yield 41.17 g (59.6 %). m.p. 187-189 °C.

#### 5 EXAMPLE 4 ALTERNATIVE PREPARATION OF PYRROLO PYRIMIDINES

Alternatively compounds of the invention can be made according to the procedure described in Browne et al. Serial No. 08/812,916. Briefly, reaction of 4-chloro-5-iodo-7-(1-β-D-5-deoxyribofuranosyl)pyrrolo[2,3-d]pyrimidine with an amine in refluxing ethanol leads to the formation of a 4-(N-substituted) amino-5-iodo-7-(1-β-D-5-deoxyribofuranosyl) pyrrolo[2,3-d]pyrimidine. This iodo compound is treated with an aryl boronic acid in the presence of a palladium catalyst to generate the targeted 4-(N-substituted)amino-5-aryl-7-(1-β-D-5-deoxyribofuranosyl)pyrrolo[2,3-d]pyrimidine, which is purified by chromatography and/or recrystallization from a suitable solvent. Thus, a halogenated nucleoside or the corresponding base was heated with an arylboronic acid and a palladium-phosphine catalyst such as palladium tetrakis(triphenylphosphine) to prepare the analogous arylated compound by displacement of halogen. Various 5-arylated pyrrolo[2,3-d]pyrimidines also can be prepared using arylstannyl compounds in place of the arylboronic acids. Flynn, B.; Macolino, B.; Crisp, G. Nucleosides & Nucleosides, 10:763 (1991).

#### 20 EXAMPLE 5 PREPARATION OF REPRESENTATIVE COMPOUNDS

##### A. Preparation of 4-N-(4-chlorophenyl)amino-5-iodo-7-(5-deoxy-1-β-D-5-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.

A mixture of 4-chloro-5-iodo-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (190 mg) and 180 mg of 4-chloroaniline in 5 mL of ethanol was heated in a sealed bottle at 90 °C for 48 h and at 135 °C for an additional 12h. The bottle was cooled in an ice bath, opened and the precipitated solid filtered. Recrystallization from ethanol-ether afforded 135 mg of the title compound. m.p. 234-235 °C.

B. Preparation of 4-N-(4-chlorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.

In a round bottom flask were placed 40 mg of 4-(4-chlorophenylamino)-5-iodo-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, 50 mg of 4-chlorophenyl boronic acid, 10 mg of Pd (PPh<sub>3</sub>)<sub>4</sub> and 4.0 mL of diglyme. To this was added 1.0 mL of 5 ethanol, 0.4 mL of a saturated aqueous solution of sodium carbonate and heated at 100 °C for 2.5 h. After filtration of the mixture through a celite pad and removal of the aqueous layer, the organic phase was evaporated under reduced pressure and chromatographed on silica gel eluting with 30:1 CH<sub>2</sub>Cl<sub>2</sub>:CH<sub>3</sub>OH. The product obtained was crystallized from ethanol to afford 35 mg of the title compound as a tan solid, m.p.

10 176-178 °C.

C. Selective Phenylation of Substituted Pyrrolo Pyrimidines.

Phenylation of 4-N-(4-fluorophenyl)amino-5-iodo-7-(5-deoxy-2,3-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine can be achieved according to the following protocol.

15 A mixture of 4-N-(4-fluorophenyl)amino-5-iodo-7-(5-deoxy-2,3-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (509 mg, 1 mmol), diglyme (20 mL) phenylboronic acid (608 mg, 4 mmol), tetrakis(triphenylphosphine) palladium catalyst (130 mg) and saturated sodium carbonate solution (3.0 mL) and ethanol (1 mL) was refluxed under nitrogen atmosphere for 4 hours. Completion of the reaction was 20 evidenced by RPTLC using 3:1 methanol:water as eluent. The reaction mixture was filtered and the residue was washed with ethanol (1x10 mL). The filtrate was concentrated under reduced pressure and the residue was chromatographed on SiO<sub>2</sub> using 3:1 hexane:ethyl acetate as eluting solvent. Appropriate fractions were combined and evaporated to obtain the desired product as a glassy material. Yield 450 mg. The 25 product was dissolved in 70% TFA (20 mL) and stirred at room temperature for 1.5 hours. Volatiles were evaporated and the residue was coevaporated with water (3x20 mL) and once with ethanol (1x10 mL). The residue was suspended in water (10 mL) and treated with NaHCO<sub>3</sub> solution (3 mL). The precipitate was collected by filtration, washed with water and dried, and the product was crystallized from boiling ethanol.

30 Yield 310 mg. m.p. 187-189 °C.

D. Preparation of 4-N-(4-Ethoxymethylphenyl)amino-5-iodo-7-(5-deoxy-2,3-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

A mixture of 4-chloro-5-iodo-7-(5-deoxy-2,3-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (2.079 g) and 4-hydroxymethylaniline (1.156 g) 5 in ethanol (30 mL) was heated to reflux for 18 hours and then evaporated under reduced pressure. The residue was dissolved in DMF (200 mL), treated with 2,2-dimethoxypropane, 4-toluenesulfonic acid monohydrate (1.48 g) and stirred at room temperature for an additional 48 hours. To the reaction mixture was added a dilute solution of sodium bicarbonate and evaporated under reduced pressure. The residue 10 was partitioned between ethyl acetate and water. The organic layer was washed with water followed by a saturated solution of sodium chloride, dried ( $MgSO_4$ ) and evaporated to give the title compound as a foam. HNMR(200 MHz;  $DMSO-d_6$ ): 8.32 (1H, s); 8.28 (1H, s); 7.83 (1H, s); 7.72 (2H, d,  $J$  = 8.3 Hz); 7.32 (2H, d,  $J$  = 8.4 Hz), 6.18 (1H, d,  $J$  = 2.9 Hz); 5.27 (1H, m); 4.72 (1H, m); 4.14 (1H, m); 3.41 (2H, q,  $J$  = 7 Hz); 1.51 (15 3H, s); 1.29 (3H, s); 1.14 (3H, t,  $J$  = 7 Hz).

E. Preparation of 4-N-(4-N-Trifluoroacetamidophenyl)amino-5-phenyl-7-(5-deoxy-2,3-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

To a mixture of 183 mg of 4-N-(4-aminophenyl)amino-5-phenyl-7-(5-deoxy-2,3-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine and 0.145 mL of diisopropylamine in dichloromethane at -78 °C was added 0.07 mL of trifluoroacetic anhydride. The reaction mixture was allowed to warm to ambient temperature over the course of 4 hours. The solvent was evaporated under reduced pressure and the residue was chromatographed over a silica gel column using 2% methanol in 25 dichloromethane as the eluting solvent to obtain 168 mg of the desired product. HNMR (200 MHz;  $DMSO-d_6$ ): 8.42 (1H, s), 7.71 (1H, s), 7.65-7.40 (9H, m), 6.29 (1H, d,  $J$  = 3.1 Hz), 5.36 (1H, m), 4.76 (1H, m), 1.54 (3H, s), 1.32 (3H, s), 1.30 (3H, d,  $J$  = 7 Hz)

F. Preparation of 4-N-(4-Fluorophenyl)amino-5-[4-(ureidomethyl)phenyl]-7-(5-deoxy- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (197)

A solution of diisopropyl azodicarboxylate (0.16 mL) in toluene (1 mL) was added dropwise to a mixture of 4-N-(4-fluorophenyl)amino-5-(4-hydroxymethylphenyl)-7-(5-deoxy-2,3-O-isopropylidene- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (270 mg), N,N'-bis(tert-butyloxycarbonyl)guanidine (281 mg) and triphenylphosphine (220 mg) in toluene (4.5 mL) at room temperature. After stirring overnight at room temperature, 5 water (1mL) was added and the reaction mixture was concentrated to dryness. The residue was purified by chromatography (silica, hexanes/ethyl acetate 90/10 to 80/20), yield 312 mg, 77%, R<sub>f</sub> = 0.45 (silica, hexanes/ethyl acetate 70/30). The product was dissolved in 70% aqueous trifluoroacetic acid and stirred at rt for 7 hours. The volatiles were evaporated and the residue was coevaporated with water (2X20 mL), ethanol 10 (2X20 mL) and purified by chromatography (silica, dichloromethane/methanol). Recrystallization of the material from ethanol afforded the pure product R<sub>f</sub> = 0.5 (silica, dichloromethane/methanol 90/10), m.p. 186-188.

15 G. Preparation of 4-N-(4-Fluorophenyl)amino-5-[4-(2-ethyloxycarbonyl- $\alpha$ -ethenyl)phenyl]-7-(5-deoxy- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (198)

Triethylphosphonoacetate (0.45 mL) was added to a suspension of sodium hydride (60% in oil, 230 mg) in ether (5 mL) at 0 °C. After stirring at 0 °C for one hour, a solution of 4-N-(4-fluorophenyl)amino-5-(4-formylphenyl)-7-(5-deoxy-2,3-O-isopropylidene- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine\* (523 mg) in ether (5 mL) was added. The reaction mixture was stirred one hour at room temperature, quenched with saturated ammonium chloride and diluted with ethyl acetate. The organics were washed with saturated ammonium chloride followed by saturated aqueous sodium chloride and dried over sodium sulfate. Evaporation of the solvent to dryness and chromatography 25 (silica, hexanes/ethyl acetate 85/15 to 75/25) gave the corresponding ethyl cinnamate, yield : 543 mg, 90%, R<sub>f</sub> = 0.55 (silica, hexanes/ethyl acetate 70/30). The product was dissolved in 70% aqueous trifluoroacetic acid and stirred at room temperature for 2 hours. The volatiles were evaporated and the residue was coevaporated with water (2X20 mL), ethanol (2X20 mL) and purified by chromatography 30 (dichloromethane/methanol 96/4 to 90/10). Recrystallization of the resulting material from ethanol afforded the pure product R<sub>f</sub> = 0.5 (silica, dichloromethane/methanol 90/10), m.p. 198-200.

\*Prepared from the corresponding 5-iodo compound and 4-formylphenylboronic acid by a procedure analogous to the one described earlier: 4-N-(4-fluorophenyl)amino-5-(4-formylphenyl)-7-(5-deoxy-2,3-O-isopropylidene- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine,  $R_f$  = 0.5 (silica, hexanes/ethyl acetate 70/30).

The methods of Examples 1-5, with modifications that will be apparent, 5 were used to synthesize the following compounds.

- #2) 4-N-(4-fluorophenyl)amino-5-(4-fluorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine.
- #12) 4-N-(4-chlorophenyl)amino-5-(4-chlorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 199-201
- 10 #13) 4-N-(4-methoxyphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine; m.p. 162-165
- #14) 4-phenylamino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine
- 15 #15) 4-N-phenylamino-5-(3-chlorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 223-225
- #16) 4-N-phenylamino-5-(4-methylphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 215-217
- #17) 4-N-(3-chlorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 224-226
- 20 #18) 4-N-(3-methylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 207-209
- #19) 4-N-(3-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 223-225
- 25 #20) 4-N-(4-hydroxyphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 188-191
- #21) 4-N-(4-cyanophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 194-196
- #22) 4-N-(4-trifluoromethylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 195-197
- 30 #23) 4-N-(4-methylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 180-182

#24) 4-N-phenylamino-5-(4-fluorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl) pyrrolo[2,3-d]pyrimidine, m.p. 225-227

#25) 4-N-(4-fluorophenyl)amino-5-(4-methoxyphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl) pyrrolo[2,3-d]pyrimidine, m.p. 192-194.

#38) 4-N-benzylamino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#39) 4-N-phenylamino-5-(4-chlorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#40) 4-N-(4-methylthiophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

5 #41) 6-bromo-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-4-N-(4-fluorophenyl)amino-5-phenylpyrrolo[2,3-d]pyrimidine

#42) 6-bromo-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-5-phenyl-4-N-phenylaminopyrrolo[2,3-d]pyrimidine

#43) 4-N-(4-aminophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 213-217 °C

10 #125) 4-N-(4-Ethoxymethylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 137-140 °C

#126) 4-N-(4-Cyanomethylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 184 °C

15 #127) 4-N-(4-Carbethoxymethylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 135-136 °C

#128) 4-N-(4-Iodophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 149-150 °C

#129) 4-N-(4-N-Trifluoroacetamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 244-246 °C

20 #130) 4-N-Phenylamino-5-(4-hydroxymethylphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 206-208 °C

#131) 4-N-(4-Fluorophenyl)amino-5-(3-aminophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 114-116 °C

25 #132) 4-N-(4-Fluorophenyl)amino-5-(4-cyanophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine. m.p.: 206-208 °C

#133) 4-N-Phenylamino-5-(4-hydroxymethylphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 206-208 °C.  
(The synthesis of 4-hydroxymethylbenzeneboronic acid was based on the procedure described by Alo et al. J. Org. Chem., 56, 3763, (1991) for similar boronic acids).

30 #134) 4-N-(4-Fluorophenyl)amino-5-(3-aminophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 114-116 °C.

#135) 4-N-(4-Fluorophenyl)amino-5-(4-cyanophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine, m.p. 217-218.5°C. [4-Cyanobenzeneboronic acid : M.S. Wong and J.-F. Nicoud Tetrahedron Lett., 34 (51), 8237, (1993)].

The following compounds can be made as described.

5 #44) 4-N-(4-fluorophenyl)amino-5-(4-fluorophenyl)-7-(1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

10 #45) 4-N-(4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-5-chloro-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#46) 4-N-(4-fluorophenyl)amino-5-phenyl-7-(1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

15 #47) 4-N-(4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-5-azido-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#48) 4-N-(4-fluorophenyl)amino-5-(4-fluorophenyl)-7-(5-deoxy-5-azido-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

20 #49) 4-N-(2-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#50) 4-N-(4-fluorophenyl)amino-5-(4-cyanophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

25 #51) 4-N-(4-fluorophenyl)amino-5-(4-carboxamidophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#52) 4-N-(4-fluorophenyl)amino-5-(4-trifluoromethylphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

30 #53) 4-N-(4-fluorophenyl)amino-5-(4-sulfonylamidophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#54) 4-N-(4-fluorophenyl)amino-5-(4-bromophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#55) 4-N-(4-fluorophenyl)amino-5-(4-hydroxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#56) 4-N-(4-fluorophenyl)amino-5-(3-chloro-4-fluorophenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

35 #57) 4-N-(4-fluorophenyl)amino-5-(4-methylphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#58) 4-N-(4-fluorophenyl)amino-5-4-phenyl-6-bromo-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#59) 4-N-(4-fluorophenyl)amino-5-(4-phenyl)-6-methyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

5 #60) 4-N-(4-fluorophenyl)amino-5-(3-fluorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#61) 4-N-(4-fluorophenyl)amino-5-(2-oxazolyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#62) 4-N-(4-fluorophenyl)amino-5-(2-thienyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

10 #63) 4-N-(4-fluorophenyl)amino-5-(4-methylphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#64) 4-N-(4-fluorophenyl)amino-5-(4-ethylphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

15 #65) 4-N-(4-fluorophenyl)amino-5-(4-carboxymethoxyphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#66) 4-N-(4-fluorophenyl)amino-5-(4-thiazolyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#67) 4-N-(4-chlorophenyl)amino-5-phenyl-7-(1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

20 #68) 4-N-(4-fluorophenyl)amino-5-(4-fluorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#69) 4-N-(4-chlorophenyl)amino-5-(4-fluorophenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

25 #70) 4-N-(3,4-dichlorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#71) 4-N-(3-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#72) 4-N-(3-cyanophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

30 #73) 4-N-(4-carboxamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#74) 4-N-(phenethyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#75) 4-N-(4-N-methylcarboxamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

5 #76) 4-N-(4-N-ethylcarboxamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#77) 4-N-(4-N,N-dimethylcarboxamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#78) 4-N-(4-N,N-diethylcarboxamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

10 #79) 4-N-(3-sulfonylamidophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#80) 4-N-(3-trifluoromethylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

15 #81) 4-N-(3-fluoro-4-chlorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#82) 4-N-(4-(2-methylethyl)phenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#83) 4-N-(4-fluorophenyl)amino-5-(benzyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

20 #84) 4-N-(3-cyanophenyl)amino-5-(4-methoxyphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#85) 4-N-(3-carboxamidophenyl)amino-5-(4-methoxyphenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

25 #140) 4-N-(3-Ethoxy-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#141) 4-N-(3-Amino-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#142) 4-N-(3-Aminophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

30 #143) 4-N-(3-N-(2,2,2-trifluoroethyl)amino-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#144) 4-N-(3-N-(1,1-difluoro thyl)amino-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#145) 4-N-(3-N-Acetylamino-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

5 #146) 4-N-(3-N-Trifluoroacetylamino-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#147) 4-N-(3-(2,2,2-Trifluoroethoxy)-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

10 #148) 4-N-(3-(1,1-Difluoroethoxy)-4-fluorophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#149) 4-N-(4-N-(2,2,2-Trifluoroethyl)aminophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

15 #150) 4-N-(4-N-(1,1-Difluoroethyl)aminophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#151) 4-N-(4-N-(1,1-Difluoroethyl)-N-methylaminophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#152) 4-N-(4-N-(2,2,2-Trifluoroethyl)-N-methylaminophenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

20 #153) 4-N-(4-(1,1-Difluoroethoxy)phenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#154) 4-N-(4-(2,2,2-Trifluoroethoxy)phenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#155) 4-N-(5-(1-methyl-3,3-difluoro-2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

25 #156) 4-N-(6-(1-methyl-3,3-difluoro-2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#157) 4-N-(5-(3,3-difluoro-2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#158) 4-N-(6-(3,3-difluoro-2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

30 #159) 4-N-(5-(2-oxoindolinyl))amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#160) 4-N-(6-(2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#161) 4-N-(5-(1-methyl-2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

5 #162) 4-N-(6-(1-methyl-2-oxoindolinyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#163) 4-N-(4-Fluorophenyl)amino-5-cyclohexyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#164) 4-N-(4-Fluorophenyl)amino-5-(1-cyclohexenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

10 #165) 4-N-(4-Fluorophenyl)amino-5-cyclopentyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#166) 4-N-(4-Fluorophenyl)amino-5-(1-cyclopentenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

15 #167) 4-N-(4-Fluorophenyl)amino-5-(2-tetrahydropyranyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#168) 4-N-(4-Fluorophenyl)amino-5-(4-tetrahydropyranyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#169) 4-N-(4-Fluorophenyl)amino-5-(1-cycloheptenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

20 #170) 4-N-(4-Fluorophenyl)amino-5-cycloheptyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#171) 4-N-(4-Fluorophenyl)amino-5-(5-hydroxy-1-pentynyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

25 #172) 4-N-(4-Fluorophenyl)amino-5-(1-pentynyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#173) 4-N-(4-Fluorophenyl)amino-5-vinyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#174) 4-N-(4-Fluorophenyl)amino-5-(1-hexenyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

30 #175) 4-N-(3,4-Methylenedioxyphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

#176) 4-N-(3,4-Ethylenedioxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#177) 4-N-Phenylamino-5-(3,4-Methylenedioxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

5 #178) 4-N-(3,4-dimethoxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#179) 4-N-(3,4-Diethoxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#180) 4-N-(4-Fluorophenyl)amino-5-(3,4-dimethoxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

10 #181) 4-N-(4-Fluorophenyl)amino-5-(3,4-diethoxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#182) 4-N-(4-Methoxyethyleneoxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

15 #183) 4-N-(3,4,5-Trimethoxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#184) 4-N-(4-Isopropoxyxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#185) 4-N-(3-methoxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

20 #186) 4-N-(3-Ethoxyphenyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#187) 4-N-(4-Fluorophenyl)amino-5-(3-methoxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

25 #188) 4-N-(4-Fluorophenyl)amino-5-(3-ethoxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#189) 4-N-(4-Fluorophenyl)amino-5-(4-ethoxyphenyl)-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#190) 4-N-(5-Benzimidazolyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

30 #191) 4-N-(5-Benzoxazolyl)amino-5-phenyl-7-(5-deoxy-1-β-D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#192) 4-N-(5-Benzothiazolyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#193) 4-N-(3-Indolyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo(2,3-d)pyrimidin .

5 #194) 4-N-(4-Indolyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#195) 4-N-(5-Indolyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

#196) 4-N-(4-N- $\gamma$ -Lactamylphenyl)amino-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo(2,3-d)pyrimidine.

10 EXAMPLE 6A      5-SUBSTITUTED COMPOUNDS

Pyrrolo[2,3-d]pyrimidine analogs substituted at the 5-position with an alkyl, alkenyl or alkynyl group are considered to fall within the scope of the present invention. These alkyl, alkenyl or alkynyl groups may contain one or more heteroatoms and may be either in the open chain or the cyclic form.

15       The synthesis of 4-N-arylamino-5-substituted pyrrolo[2,3-d]pyrimidines can be achieved by application of the methods illustrated by Friesen and Sturino (*J. Org. Chem.* **55**, 2572 (1990)), from a suitably functionalized 4-N-arylamino-5-iodo-pyrrolo[2,3-d]pyrimidine and an unsaturated trialkyl stannane in the presence of a palladium catalyst. The 5-alkenyl derivative so obtained can be hydrogenated in order 20 to prepare the corresponding alkyl analog. Alternatively, the reaction of a functionalized 4-N-arylamino-5-iodo-pyrrolo[2,3-d]pyrimidine with an olefin under Heck arylation conditions (Heck et al *J. Org. Chem.* **43**, 2454 (1978), *J. Org. Chem.* **43**, 2952 (1990)) could also give rise to a 5-alkenyl derivative which in turn can be hydrogenated to give the corresponding 5-alkyl analogs.

25       The preparation of 5-alkynyl derivatives can be accomplished by reaction of a suitably functionalized 4-N-arylamino-5-iodo-pyrrolo[2,3-d]pyrimidine and an alkyne in the presence of a palladium catalyst as is well known in the literature (R.C. Larock, "Comprehensive Organic Transformations: A Guide to Functional Group Preparations", VCH Publishers, Inc. 1989 page 302).

30       The preparation of 5-dioxolane derivatives of pyrrolo[2,3-d]pyrimidines can be achieved by reaction of a suitably functionalized 4-N-arylamino-5-iodo-pyrrolo[2,3-

d]pyrimidine with carbon monoxide under palladium catalized conditions as described in the literature (R.C. Larock, "Comprehensive Organic Transformations: A Guide to Functional Group Preparations", VCH Publishers, Inc. 1989 pag 678) to afford a 5-formylpyrrolo[2,3-d]pyrimidine which can be later reacted with a diol under acidic conditions as described, for example, by Astles et al (*J. Med. Chem.* 39, 1423 (1996))

5 to generate the target dioxolane.

The following examples illustrate the use of these methods.

136) 4-N-(4-Fluorophenylamino)-5-(2-tetrahydropyranyl)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

A procedure based on a report by Friesen and Sturino (*J. Org. Chem.* 55, 10 2572 (1990)) was used: A mixture of 4-N-(4-fluorophenylamino)-5-iodo-7-(5-deoxy-2,3-O-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (1.377g), 5.224g of 2-(tri-n-butyltin)dihydropyran (Synthesized from 2-lithio-dihydropyran, Boeckman and Bruza, *Tetrahedron* 23, 3997(1981)) and bistrifphenylphosphine palladium dichloride (382 mg) in toluene (50 mL) under an atmosphere of nitrogen was heated to reflux for a period 15 of 18h. The black precipitate formed was removed by filtration and the solvent was evaporated under reduced pressure. The residual oil obtained was chromatographed on silica gel eluting with hexanes followed by 15%(v/v) ethyl acetate in hexanes. The semisolid that was obtained was treated with a mixture of dichloromethane and hexanes. The light yellow precipitate was filtered to afford 4-N-(4-fluorophenylamino)-5- 20 (2-dihydropyranyl)-7-(5-deoxy-2,3-O-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine,  $R_f$  = 0.61 (30% ethyl acetate in hexanes; silica gel). This material was dissolved in methanol (25 mL). Sodium cyanoborohydride and a methanolic HCl solution were added alternatively and successively in order to keep the pH of the reaction 25 mixture between 4 and 5 as described by Tius et al (*J. Am. Chem. Soc.* 113, 5775(1991)). The reaction was monitored by HNMR and when it appeared to have stopped, NaOH was added followed by water and extracted with ethyl acetate. The organic phase was washed with water and a saturated sodium chloride solution, dried over MgSO<sub>4</sub> and evaporated under reduced pressure. The white foam obtained was dissolved in methanol (50 mL) and treated with a 1M solution of hydrochloric acid. This 30 mixture was heated to reflux for a period of 2h, cooled to room temperature and

evaporated the solvent under reduced pressure. The residue was treated with a dilute sodium bicarbonate solution, the water was removed by evaporation, coevaporating with toluene and the white precipitate heated to reflux in ethanol for 5 min. The hot thanolic suspension was filtered and the ethanol evaporated. The white solid obtained was chromatographed on silica using 3% methanol in dichloromethane. Isolated the title 5 compound after treatment with a small amount of methanol ( $R_f = 0.58$  ; 9:1 dichloromethane:methanol on silica gel)

137) 4-N-(4-Fluorophenylamino)-5-[6-(3,4-dihydro-2-H-pyranyl)]-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

A mixture of 4-N-(4-fluorophenylamino)-5-iodo-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (1.589 g), 6.257 g of 2-(tri-n-butylin)dihydropyran and palladium bistrifphenylphosphine dichloride (363 mg) in toluene (50 mL) under an atmosphere of nitrogen was heated to reflux for a period of 2.5 h. The black precipitate formed was removed by filtration and the solvent was evaporated under reduced pressure. Ether was added and the precipitate formed was 15 filtered and rinsed with ether. The solid obtained was treated with acetonitrile, filtered and rinsed one more time with ether. Dried under reduced pressure to obtain a product with  $R_f = 0.58$  (9:1 dichloromethane:methanol on silica gel), M.P. 211-213°C.

138) 4-N-(4-Fluorophenylamino)-5-(5-hydroxy-1-pentylyn)-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine

20 A mixture of 4-N-(4-fluorophenylamino)-5-iodo-7-(5-deoxy-2,3-O-isopropylidene-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine (1.2545 g), copper(I)iodide (29 mg) 1.4 ml of 4-pentyne-1-ol and bistrifphenylphosphine palladium dichloride (100 mg) in triethylamine/acetonitrile (18 mL/10 mL) under an atmosphere of nitrogen was heated to reflux for a period of 4h. The black precipitate formed was removed by filtration and 25 the solvent was evaporated under reduced pressure. The residue was partitioned between ethyl acetate and water. The organic phase was washed (water, saturated sodium chloride solution), dried ( $MgSO_4$ ) and evaporated. Chromatography on silica gel using 40% ethyl acetate in hexanes gave an off-white solid,  $R_f = 0.2$  (30% ethyl acetate in hexanes). This material was dissolved in 70% trifluoroacetic acid in water

and stirred at room temperature for 1.5 h, evaporated under reduced pressure and coevaporated with ethanol and toluene. The residue was treated with ethanol, water and a dilute solution of sodium bicarbonate. After stirring for 15 min filtered the white precipitate and chromatographed on silica using 5% methanol in dichloromethane. Isolated the product with  $R_f$  = 0.26 (5% methanol in dichloromethane; silica gel), m.p.

5 211-213 °C.

#### EXAMPLE 6B 6-SUBSTITUTED COMPOUNDS

The 6-halosubstituted pyrrolo[2,3-d]pyrimidine nucleosides of the invention can be prepared by halogenation of the base, as described in Example 2F (preparation of 6-bromo-5-phenyl-4-N-phenylaminopyrrolo[2,3-d]pyrimidine) followed by ribosylation 10 and deprotection as described in Example 3. It will be apparent that other halogenated analogs can be prepared in a similar fashion.

The preparation of 6-alkyl substituted pyrrolo[2,3-d]pyrimidines generally follows the sequence outlined in Example 1, except that the phenacyl chloride has an appropriate alkyl substituent at the aliphatic carbon alpha to the carbonyl group.

#### 15 EXAMPLE 6C PRODRUGS

Prodrugs of the compounds of the present invention are included in the scope of this application. Such prodrugs may be prepared, for example, by esterification of the hydroxyl groups on the sugar moiety. The synthesis of an ester derivative with improved water solubility is described in the following example:

20 139) 4-N-(4-Fluorophenylamino)-5-phenyl-7-(5-deoxy-2,3-di-O-(4-(4-morpholinomethyl)benzoyl)-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine dihydrochloride salt

A mixture of 1.697g of 4-morpholinomethylbenzoyl chloride (Bundgaard et al, *Pharm. Res.* 8, 1087 (1991)) in 35 mL of pyridine was treated with 855 mg of 4-N-(4-fluorophenylamino)-5-phenyl-7-(5-deoxy-1- $\beta$ -D-ribofuranosyl)pyrrolo[2,3-d]pyrimidine and stirred at room temperature for 46h. Partitioned between ethyl acetate and a dilute  $NaHCO_3$  solution. The organic phase was washed (water, saturated sodium chloride solution), dried ( $MgSO_4$ ) and evaporated under reduced pressure.

Purified by two chromatographies: the first on silica, using 70% ethyl acetate in hexanes followed by 10% methanol in methylene chloride, the second on Bakerbond™ reverse phase silica using 1% acetic acid/5% water in methanol. The fractions which appeared to contain the product by thin layer chromatography were pooled, evaporated and lyophilized. Dissolved in ether and rinsed with dilute sodium bicarbonate, water and 5 saturated sodium chloride. Dried over MgSO<sub>4</sub> and evaporated under reduced pressure. Obtained a white foam (R<sub>f</sub>=0.57; 9:1 CH<sub>2</sub>Cl<sub>2</sub>:CH<sub>3</sub>OH, silica) which was dissolved in methanol and treated with 80 mL of 0.02N aqueous HCl. The methanol was evaporated under reduced pressure and the aqueous portion lyophilized to give the dihydrochloride as a tan solid, m.p. 188-194°C(d).

10

## SYNTHESIS OF PYRAZOLO PYRIMIDINES

### EXAMPLE 7 PREPARATION OF PYRAZOLO PYRIMIDINES

Still another aspect of this invention is the preparation of 5'-modified pyrazolo[3,4-d]pyrimidine ribosides. Accordingly, a substituted pyrazolo[3,4-d] pyrimidine is ribosylated with an esterified 5-deoxy- or 5-deoxy-5-azido-ribofuranoside 15 analog in the presence of a Lewis acid such as boron trifluoride. Browne et al., Serial No. 08/812,916; Cottam, et al., *J. Med. Chem.*, 27:1120 (1984).

The 5-substituted sugar is prepared by esterification of the deblocked sugar. Suitable esters include the acetate, benzoate, toluate, anisoate and the like. The substituted pyrazolo[3,4-d]pyrimidine base may be prepared by a variety of known 20 procedures which are apparent to practitioners. Another exemplary synthetic route follows.

One route comprises coupling an esterified ribose prepared as described above with a 3-substituted pyrazolo[3,4-d]pyrimidin-4-one. After ribosylation the pyrimidone riboside may be activated by chlorination with thionyl chloride/dimethyl-25 formamide or other reagents previously described and then reacted with ammonia or an amine to provide a variety of substituted 5'-modified N-4-substituted-amino-pyrazolo[3,4-d]pyrimidine nucleosides.

Another route for preparation of substituted pyrazolo[3,4-d]pyrimidine nucleosides comprises coupling the esterified ribose with various substituted 4-amino 30 or 4-substituted aminopyrazolo[3,4-d]pyrimidines, using procedure similar to those

described for the pyrrolo pyrimidines. The resulting products are then further modified or deblocked to afford the desired compounds. For example, 3-phenyl-4-phenylaminopyrazolo[3,4-d]pyrimidine 5-modified ribosides are prepared from 3-phenyl-4-phenylaminopyrazolo[3,4-d]pyrimidine and various 5'-modified sugars.

In another aspect of the present invention, 3-halogenated pyrazolo[3,4-5 d]pyrimidine ribosides can be arylated using arylboronic acids and palladium catalysts as described for the pyrrolo[2,3-d]pyrimidines.

The required 3-iodopyrazolo[3,4-d]pyrimidone nucleosides are prepared by nonaqueous diazotization-iodination of the 3-amino compounds using a nitrite ester such as isoamyl nitrite and methylene iodide. Alternatively, 4-chloro or 4-amino 10 pyrazolo[3,4-d] pyrimidine may be iodinated using N-iodosuccinimide in a solvent such as DMF and the resulting 5-iodo heterocycle is coupled to the sugar to obtain the desired 4-iodinated pyrazolo[3,4-d]pyrimidine nucleoside.

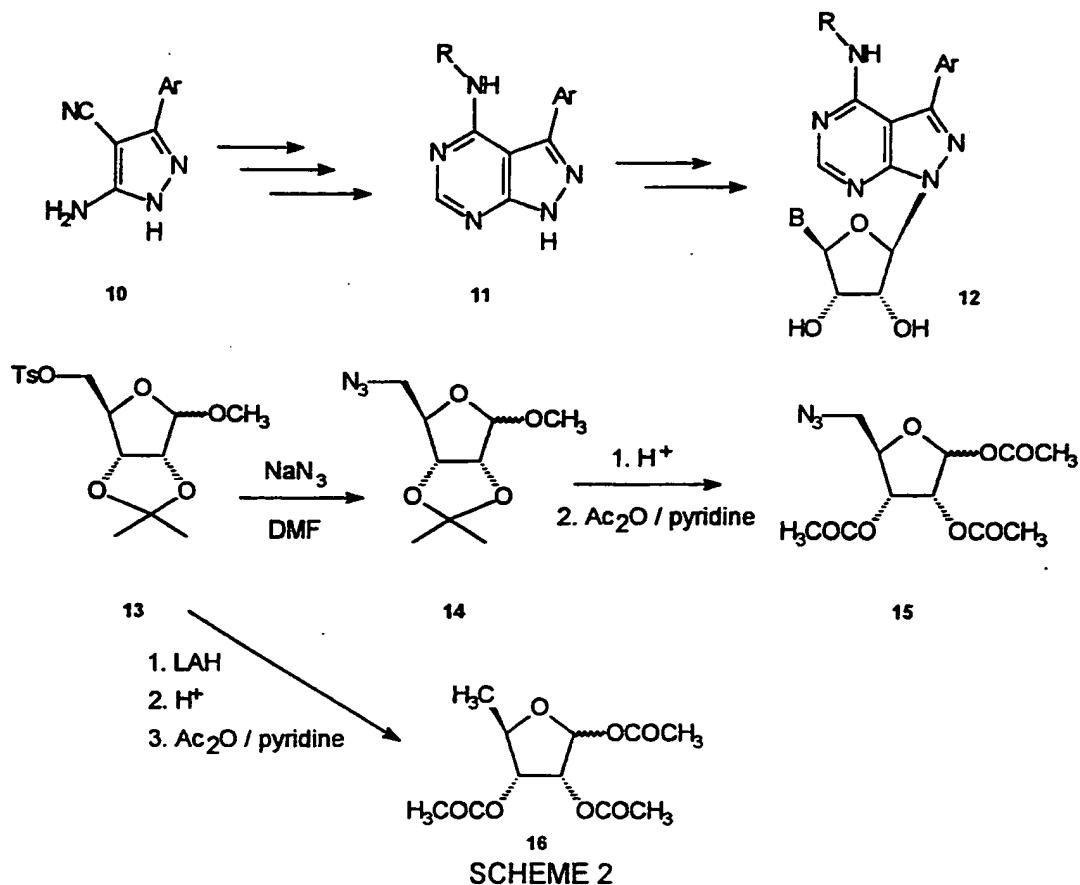

#### EXAMPLE 8

#### PREFERRED PREPARATION OF PYRAZOLO PYRIMIDINES

The general route for the synthesis of various 3-aryl-4-arylamino pyrazolo 15 [3,4-d]pyrimidine nucleosides is delineated in Scheme 2. Various 3-arylsubstituted 5-aminopyrazole-4-carbonitriles (10) were synthesized by a procedure analogous to the one reported in Kobayashi, *Chem. Pharm. Bull. (Japan)* 21, 941 (1973). These intermediates were further converted by a three step procedure to provide various 3-aryl-4-arylamino pyrazolo[3,4-d]pyrimidine bases (11) used for synthesis of final 20 compounds. Cheng, C.C., Robins, R.K., *J. Org. Chem.*, 21, 1240 (1966).

The carbohydrate moieties used in the current invention, e.g. 5-azido-5-deoxy-1,2,3-tri-O-acetyl-ribofuranose (15), where B=  $\text{CH}_2\text{N}_3$  were synthesized as shown in Scheme 2. Treatment of (13) (Snyder, J.; Serianni, A.; *Carbohydrate Research*, 163:169 (1987)) with sodium azide in dry DMF at elevated temperatures provided the 25 corresponding 5-azido ribofuranoside (14) which was subjected to removal of the protecting groups under acidic conditions and the resulting ribose was acetylated with acetic anhydride and pyridine to provide (15). 5-Deoxy-1,2,3-tri-O-acetyl-D-ribofuranose (16) used in the current invention was synthesized by subjecting (13) to LAH reduction to provide methyl 5-deoxy-2,3-isopropylidene-D-ribofuranose, followed 30 by appropriate protecting group manipulations.

Coupling of heterocycles with the above ribofuranose moieties was conducted in boiling nitromethane using  $\text{BF}_3$ -etherate as a catalyst to obtain blocked nucleosides which upon deblocking with sodium methoxide in methanol provided the desired 5'-modified 3-aryl-4-aminopyrazolo[3,4-d]pyrimidine nucleosides of general structure (12). The 5'-azido analogs are then subjected to reduction with triphenyl-5 phosphine and pyridine to provide the corresponding 5'-amino analogs.

Alternatively, the azide function could be reduced by catalytic hydrogenation or by using other reagents such as propan thiol/acetic acid or sodium dithionite.

The following compounds were made.

5        #86) 4-N-phenylamino-3-phenyl-1-(5'-deoxy-1- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine

10      #87) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-phenylaminopyrazolo[3,4-d]pyrimidine

15      #88) 3-phenyl-4-N-phenylamino-1-(1- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine

20      #89) 4-N-[(4-methoxyphenyl)amino]-3-phenyl-1-(5-deoxy-ribofuranosyl)pyrazolo[3,4-d]pyrimidine.

25      #90) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-4-N-(4-methoxyphenylamino)-3-phenylpyrazolo[3,4-d]pyrimidine.

30      #91) 4-N-(4-chlorophenyl)amino-3-phenyl-1-(5-deoxyribofuranosyl)pyrazolo[3,4-d]pyrimidine

15      #92) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)4-N-(4-chlorophenyl)amino-3-phenyl-pyrazolo[3,4-d]pyrimidine.

20      #93) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-methylphenyl)-4-N-phenylamino-pyrazolo[3,4-d]pyrimidine.

25      #94) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-methoxyphenyl)-4-N-phenylaminopyrazolo[3,4-d]pyrimidine.

30      #95) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-4-N-(4-methoxyphenyl)amino-3-(4-methylphenyl)-pyrazolo[3,4-d]pyrimidine.

25      #96) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-chlorophenyl)-4-N-phenylaminopyrazolo[3,4-d]pyrimidine.

25      #97) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(2-thienyl)-4-(phenylamino)pyrazolo[3,4-d]pyrimidine.

The following exemplary compounds can be made by same procedure.

30      #98) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-chlorophenyl)-4-N-(4-fluorophenylamino)pyrazolo[3,4-d]pyrimidine.

30      #99) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-fluorophenyl)-4-N-phenylaminopyrazolo[3,4-d]pyrimidine.

#100) 1-(5-azido-5-d oxy-1- $\beta$ -D-ribofuranosyl)-3-(4-fluorophenyl)-4-N-(4-fluorophenylamino)pyrazolo[3,4-d]pyrimidine.

#101) 1-(5-azido-5-d oxy-1- $\beta$ -D-ribofuranosyl)-3-(4-fluorophenyl)-4-N-(cyanophenyl)aminopyrazolo[3,4-d]pyrimidine.

5 #102) 1-(5-azido-5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-fluorophenyl)-4-N-(carbamoylphenyl)aminopyrazolo[3,4-d]pyrimidine.

#103) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

10 #104) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(3,4-difluorophenyl)-4-N-(fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#105) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(3-chloro-4-fluorophenyl)-4-N-(4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#106) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(3,4-difluorophenyl)-4-N-(4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

15 #107) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-fluorophenyl)-4-N-(4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#108) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-methoxyphenyl)-4-N-(4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#109) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-ethylphenyl)-4-N-(4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

20 #110) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(3-oxazolyl)-4-N-(4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#111) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(3-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

25 #112) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(3-chlorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#113) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(3,4-difluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

#114) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(3-chloro-4-fluorophenyl)aminopyrazolo[3,4-d]pyrimidine.

30 #115) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-ethylphenyl)aminopyrazolo[3,4-d]pyrimidine.

- #116) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-(2-methylphenyl)aminopyrazolo[3,4-d]pyrimidine.
- #117) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-ethoxyphenyl)aminopyrazolo[3,4-d]pyrimidine.
- 5 #118) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-methylphenyl)aminopyrazolo[3,4-d]pyrimidine.
- #119) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-cyanophenyl)aminopyrazolo[3,4-d]pyrimidine.
- #120) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-carbamoylphenyl)aminopyrazolo[3,4-d]pyrimidine.
- 10 #121) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-ethylphenyl)aminopyrazolo[3,4-d]pyrimidine.
- #122) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-sulfonamidophenyl)aminopyrazolo[3,4-d]pyrimidine.
- 15 #123) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-phenyl-4-N-(4-acetamidophenyl)aminopyrazolo[3,4-d]pyrimidine.
- #124) 1-(5-deoxy-1- $\beta$ -D-ribofuranosyl)-3-(4-methoxyphenyl)-4-N-(henyl)aminopyrazolo[3,4-d]pyrimidine.

#### EXAMPLE 9      SYNTHESIS OF HETEROCYCLES

The following heterocycles, used as starting materials in this example, and 20 to prepare the corresponding nucleosides in Example 8, were synthesized by procedures analogous to those in Kobayashi, *Chem. Pharm. Bull. (Japan)*, 21, 941 (1973) and Cheng, et al. *J. Org. Chem.*, 21, 1240 (1966).

- 4-N-(4-Methoxyphenyl)amino-3-phenylpyrazolo[3,4-d]pyrimidine.
- 4-N-(4-Chlorophenyl)amino-3-phenylpyrazolo[3,4-d]pyrimidine.
- 25 4-N-Phenylamino-3-(2-thienyl)pyrazolo[3,4-d]pyrimidine.
- 3-(4-Methylphenyl)-4-N-phenylaminopyrazolo[3,4-d]pyrimidine.
- 3-(4-Methoxyphenyl)-4-N-phenylaminopyrazolo[3,4-d]pyrimidine.
- 3-(4-Methoxyphenyl)-4-N-(4-methylphenyl)aminopyrazolo[3,4-d]pyrimidine.
- 3-(4-Chlorophenyl)-4-N-phenylaminopyrazolo[3,4-d]pyrimidine.
- 30 Other heterocycles used for the synthesis of Examples #98-124 can be made by the same procedures.

A. Preparation of 5-Azido-5-deoxy-1-O-methyl-2,3-O-(1-methylethylidene)-D-ribofuranoside (14).

A mixture of 1-O-methyl-2,3-O-(1-methylethylidene)-5-O-(4-methylbenzene sulfonyl)-D-ribofuranoside (8.0 g) (Snyder, J.; Serianni, A.; Carbohydrate Research, 163:169 (1987)), dry DMF (40 mL) and NaN<sub>3</sub> (4.0 g) was heated at 80 °C for 12 hours.

5 The solvent was evaporated and the residue was chromatographed over silica gel using CH<sub>2</sub>Cl<sub>2</sub>. The fractions containing the faster moving product were pooled and evaporated to obtain 4.8 g (94% yield) of a syrupy product.

B. Preparation of 5-azido-5-deoxy-1,2,3-O-triacetyl-D-ribofuranoside (15).

A solution of 4.6 g (20 mmol) 5-azido-5-deoxy-1-O-methyl-2,3-O-(1-methylethylidene)-D-ribofuranoside (14), in 0.1% H<sub>2</sub>SO<sub>4</sub> (300 mL) was refluxed for 3 hours. The acid was neutralized (pH ~5) with Amberlite 400 (OH<sup>-</sup> form) and the resin filtered and washed with ethanol (2 x 20 mL). The filtrate was evaporated to dryness under high vacuum to give the intermediate compound as a syrupy residue; <sup>1</sup>H and <sup>13</sup>C NMR confirmed the identity of the product as a mixture of  $\alpha$  and  $\beta$  anomers. This 15 product (3.1 g, 0.017 mole) was dissolved in 10 ml of pyridine and was treated with acetic anhydride (18 ml). The mixture was stirred for 24 hours and concentrated under vacuum. The residue was dissolved in CH<sub>2</sub>Cl<sub>2</sub> and the solution washed with 5% NaHCO<sub>3</sub>. The organic layer was then washed with 0.5 N H<sub>2</sub>SO<sub>4</sub>, dried (Na<sub>2</sub>SO<sub>4</sub>) and evaporated. The residue was filtered through a plug of silica gel (CH<sub>2</sub>Cl<sub>2</sub>) and the 20 filtrate concentrated to afford the title compound, 4.5 g (98% yield) as a semisolid mixture of  $\alpha$  and  $\beta$  isomers.

C. Preparation of 5-deoxy-1,2,3-O-tri-O-acetyl-D-ribofuranoside, (16).

This compound was prepared as described in Snyder, J.; Serianni, A.; Carbohydrate Research, 163:169 (1987).

25 D. Synthesis of 3-aryl-4-arylaminopyrazolo[3,4-d]pyrimidine nucleosides.

To a slurry of the heterocycle (11) (5.0 mmol) in nitromethane under argon, was added acyl protected ribofuranose (5-7 mmol). The mixture was heated approximately to 80 °C and treated with BF<sub>3</sub>-etherate (7.0 mmol). The reaction mixture

was refluxed gently for 90 minutes, then cooled and evaporated under vacuum. The residue was treated with triethyl amine and water and extracted with methylene chloride. The organic layer was dried over sodium sulfate and evaporated. The residue was chromatographed over silica gel using a gradient of ethyl acetate and hexane as eluting system. The product thus obtained was dissolved in methanol and treated with freshly prepared sodium methoxide solution to adjust the pH to ~ 10. After stirring the reaction for 2 hours the pH of the solution was adjusted to 4 by adding strongly acidic resin Dowex-120 H<sup>+</sup> type. The resin was filtered off, washed with methanol and the filtrate was evaporated under reduced pressure. The residue was crystallized from appropriate solvent.

10 The following compounds were synthesized by the procedures in Examples 8 and 9 (Scheme 2).

#89) 4-N-(4-Methoxyphenyl)amino-3-phenyl-1-(5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 165-165.5 °C

15 #90) 4-N-(4-Methoxyphenyl)amino-3-phenyl-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 85 °C.

#91) 4-N-(4-Chlorophenyl)amino-3-phenyl-1-(5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 152-153 °C.

#92) 4-N-(4-Chlorophenyl)amino-3-phenyl-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 165-167 °C.

20 #93) 3-(4-Methylphenyl)-4-N-phenylamino-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 94-96 °C.

#94) 3-(4-Methoxyphenyl)-4-N-phenylamino-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 144-145 °C.

25 #95) 3-(4-Methoxyphenyl)-4-N-(4-methylphenyl)amino-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 100-102 °C.

#96) 3-(4-Chlorophenyl)-4-N-phenylamino-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 181-183 °C.

#97) 4-N-Phenylamino-3-(2-thienyl)-1-(5-azido-5-deoxy- $\beta$ -D-ribofuranosyl)pyrazolo[3,4-d]pyrimidine. m.p. 89-92 °C.

It will be readily apparent that many compounds, including those in the formulas above, and in the appended claims, can be made by these various exemplary methods.

### UTILITY

The adenosine kinase inhibitors of the present invention may be used in 5 the treatment of a variety of clinical situations where increasing local levels of adenosine are beneficial. The compounds of the invention act as potent inhibitors of adenosine kinase *in vitro*, and the present compounds in particular are orally available.

Adenosine has been proposed to serve as a natural anticonvulsant.

Compounds of the present invention which enhance adenosine levels are useful in 10 seizure disorders, as shown in animal models of seizures detailed below. Adenosine kinase inhibitors may be used in the treatment of patients with seizures or epilepsy or patients who might have chronic low or insufficient adenosine levels or might benefit from increased adenosine such as those suffering from autism, cerebral palsy, insomnia or other neuropsychiatric symptoms.

15 Adenosine kinase inhibitors of the invention find further utility in the treatment of acute pain, including but not limited to peri-operative, post-surgical, and end-stage cancer pain. Compounds of the invention are also useful in controlling chronic pain, including but not limited to pain caused by arthritis, cancer, trigeminal neuralgia, multiple sclerosis, neuropathies such as those arising from diabetes and 20 AIDS and in addition, lower back pain and phantom limb pain. Treatment of acute and chronic pain can be treated by administration of the compounds of the invention in a systemic or oral fashion, as illustrated by animal models detailed below.

Adenosine has been reported to be an endogenous modulator of inflammation by virtue of its effects on stimulated neutrophil function and on 25 macrophage, lymphocyte and platelet function. The compounds of this invention may therefore be used in treating conditions in which inflammatory processes are prevalent such as arthritis, reperfusion injury, and other inflammatory disorders.

The compounds of the invention are also useful in the treatment of chronic neurodegenerative disease, such as Alzheimer's disease, Parkinson's disease, ALS, 30 Huntington's disease, and AIDS dementia.

Stroke and central nervous system ("CNS") trauma are conditions where tissue injury results from reduced blood supply to the CNS and are thus amenable to an intervention that provides increased levels of adenosine to the compromised tissue. It is reported that a significant component of the neurodegeneration resulting from stroke or CNS trauma is caused by increased excitatory amino acid release and sensitivity, 5 which results in neurons being stimulated to death. In addition to vasodilatory properties, adenosine has been reported to inhibit release of excitatory amino acids (Burke and Nadler *J. Neurochem.*, 1988, 51:1541) and responsiveness of neurons to excitation. The compounds of this invention, which increase adenosine levels, may also be used in the treatment of conditions where release of or sensitivity to excitatory amino 10 acids is implicated.

To assist in understanding the present inventions and especially their properties and utilities, the results of a series of experiments are also included. These experiments demonstrated that a number of compounds of the present invention were potent inhibitors of a purified cardiac adenosine kinase. Certain adenosine kinase 15 inhibitors were found to inhibit seizures in a well-established animal model, and exemplary compounds inhibited pain in two other animal models. The results of these studies are set forth in Tables 1-3.

#### AK INHIBITION

Adenosine kinase activity was measured essentially as described by 20 Yamada et al. *Biochim. Biophys. Acta* 660, 36-43 (1988) with a few minor modifications. Assay mixtures contained 50 mM TRIS-maleate buffer, pH 7.0, 0.1% BSA, 1 mM ATP 1 mM MgCl<sub>2</sub>, 0.5  $\mu$ M [ $^{\text{U}}\text{U}$ -<sup>14</sup>C] adenosine (400-600 mCi/mmol) and varying duplicate concentrations of inhibitor. The reactions were initiated by addition of approximately 0.1  $\mu$ U partially purified pig heart adenosine kinase, or recombinant human adenosine 25 kinase (Spychala et al., *Proc. Natl. Acad. Sci. USA* 93, 1132 (1996), where one unit is defined as that amount of enzyme required to phosphorylate 1  $\mu$ mol adenosine per minute. The reactions were incubated for 20 minutes at 37°C. The assay was quenched upon spotting 30  $\mu$ L aliquots onto 2 cm<sup>2</sup> pieces of Whatman DE81 anion exchange paper. The paper squares were washed for 3 minutes in 6 L 30 distilled/deionized water to remove the unreacted adenosine. The washed squares were rinsed in 95% ethanol and dried in an oven at 100°C for 10 minutes. The amount

of  $^{14}\text{C}$ -AMP was quantified by scintillation counting. The concentration of inhibitor required to inhibit 50% of the adenosine kinase activity ( $\text{IC}_{50}$ ) was determined graphically. The results for representative compounds of the invention are shown in Table 1.

#### ANTICONVULSANT ACTIVITY

5 The anticonvulsant activity of the tested compounds was evaluated in male SA rats (100-150g, Simonsen) using the maximal electroshock (MES) model described in Swinyard et al., *Antiepileptic Drugs*, 3d Ed. at 85-102 (Levy, et al., eds.), NY: Raven Press (1989). The rats were maintained on a 12/12 light/dark cycle in temperature controlled facilities with free access to food and water. For p.o. administration, the 10 animals are fasted overnight, prior to the experiment. One to two hours prior to seizure testing, the animals were injected interperitoneally (ip) or orally (*per os*, po) with one of various doses of test compound dissolved in DMSO or PEG 400.

15 Maximal electroshock seizures (MES) were induced by administering a 150 mA, 60 Hz current for 0.2 seconds via corneal electrodes using a Wahlquist Model H stimulator. The endpoint measurement was suppression of hind limb tonic extension (HTE), which was judged to occur when any hind leg extension did not exceed a 90 degree angle with the plane of the body. HTE suppression of this kind indicates that the test compound has the ability to inhibit seizures, in theory by inhibiting seizure propagation and spread, if not by raising the seizure threshold (*i.e.* preventing seizure 20 potential). This endpoint was expressed as the percentage of animals in which the response was inhibited. Typically, compounds were screened initially at one hour following a dose of 5 mg/kg ip. In some cases, the effective dose at which 50% of the rats were protected ( $\text{ED}_{50}$ ) was calculated from a dose response curve. The results for exemplary compounds of the invention are in Table 1, expressed as  $\text{ED}_{50}$  values. For 25 compounds where the  $\text{ED}_{50}$  was not calculated, the result is  $>5$  if HTE was inhibited in fewer than 50% of the animals in the initial screen, or  $<5$  if HTE was inhibited in more than 50% of the animals in the initial screen.  $>>$  or  $<$  signs were used to indicate that either no activity or maximal activity, respectively, were observed at the stated dose.

ANALGESIC ACTIVITY

Analgesic activity of representative compounds of the invention was evaluated in male SA rats (100-150g, Simonsen) using the hot plate, tail flick, and formalin paw models of pain, similar to those described in Sosnowski et al., *J. Pharmacol. Exper. Ther.*, 250:3, 915-922 (1989). See also, *Life Sciences* 51:171-76 (1992). These models measure pain avoidance and tolerance in response to a

regulated stimulus, and compare the responses of animals before and after they are given test compound.

The tail flick response is evoked by placing the tail of a rat over a focused beam of light. The latency or response time to flick the tail away from the incident heat source was recorded electronically by an appropriate measuring device, for example an apparatus manufactured by Ugo Basile. Longer times indicate greater tolerance to the thermally induced pain stimulus. The maximum exposure time is limited to avoid tissue damage (8 seconds), in the event a rat does not respond to the stimulus within a predetermined period. In this experiment, the rats were accommodated to the hand restraint of the testing to prevent spurious movements from causing false responses.

10 A mark was made on the dorsal surface of each tail approximately 3-5 cm from the tip to ensure testing at the same location on the tail.

In the hot plate model, a rat is placed on a heated metal plate (typically 50 C). The endpoint of this evaluation is the time required for the rat to lick its hind paw. A predetermined cutoff time (60 seconds) is used to protect the animals from injury, in

15 the event there is no response.

Three hot plate and tail flick tests were performed 15 minutes apart prior to dosing; these tests serve as the baseline for each animal. Rats were administered (either i.p. or p.o.) one of various doses and the tail flick and hot plate responses were monitored at various times, (e.g. 30, 60, 120, 240, and 480 minutes after 20 administration). Dose response curves for each compound in the tail flick and hot plate tests are made by plotting the dose against the normalized peak response, or percent maximum possible effect (%MPE). The %MPE is calculated as

$$\frac{(\text{test latency} - \text{baseline latency})}{(\text{cutoff latency} - \text{baseline latency})} \times 100\%.$$

25 The effective dose at which 50% of the rats were protected ( $ED_{50}$ ) was calculated from the dose response curve using linear regression analysis. Results for representative compounds according to the invention are set forth in Table 2.

#### Formalin Paw Assay

In this assay, injection of formalin, an irritant, into the hindpaw of rats 30 typically evokes a biphasic response of pain-related behaviors. Phase 1 of the

response which is brief, lasting approximately 0 - 5 min post-injection, is followed by a more prolonged phase 2, lasting approximately 10 - 80 min post-injection. Phase 1 behavior is thought to be a direct effect of the irritant on nociceptors at the injection site while phase 2 behavior is thought to include a hyperalgesic component mediated by sensitization of neuronal elements within the spinal cord. Studies from other 5 laboratories have found the first portion of Phase 2 (sometimes referred to as Phase 2a) to be most responsive to pharmacological manipulation.

Rats (male, Simonsen) weighing between 100 - 200 g, are used in the present experiments. For screening purposes drugs are administered orally 90 min prior to initiation of formalin test. At designated intervals the animals in groups of 4 are placed 10 individually in a small animal restrainer with the right hindpaw accessible through a hole in the bottom of the restrainer. The formalin paw assay is initiated by the injection using a 30G needle of 50 ul of a 5% formalin solution in saline into the right plantar surface of each hindpaw. The rat is then immediately placed in a separate plexiglass box and scoring (described below) of the animal's behavior is begun at 1.7 min after formalin 15 injection. The instantaneous behavior of each animal in a group of 4 was observed and assigned a score once in each 20 second interval. This sequence is repeated over a 30 min period. The scoring protocol is an adaptation of the method published by Dubuisson and Dennis (Pain 4:161 -174, 1977) which assigns a score from 0 - 3 as follows:

- 20 0 - no discernible favoring of injected paw, weight evenly distributed
- 1 - injected paw is favored, rests lightly on floor
- 2 - injected paw is elevated
- 3 - injected paw is vigorously licked, bitten, or shaken

Scores are continuously recorded directly onto an Excel spreadsheet. For 25 comparative examination of drug effects the data is reported two different ways: 1) the scores are summed for Phase 1 (1.7 - 5 min post-formalin) and for Phase 2 (10.3 - 30 min post-formalin) and the mean values of the sums are determined from 6 different animals with results expressed as % inhibition compared to vehicle control; 2) the total number of incidences specifically of licking/biting behavior is summed over Phase 2 and

mean values determined from 6 different animals with results expressed as % inhibition compared to vehicle control. These data are presented in Table 2a.

10 **ANTI-INFLAMMATORY ACTIVITY**

Carrageenan (Type  $\lambda$ ) was suspended in sterile PBS at 1% (w/v), autoclaved for 30 minutes, and stored in a refrigerator. Rats were pretreated with vehicle or AK inhibitor (10 mg/kg) by oral gavage or i.p. administration and the volume of the left hind paw was measured using a water displacement plethysmometer (Stoelting Co., Wood Dale, IL). One hour after oral treatment or 30 minutes after i.p. treatment, the rats were briefly anesthetized, and 0.1 ml of the carrageenan solution was injected subcutaneously into the planar surface of the left hind paw. The ensuing paw swelling was measured by plethysmometry after 3 hours. The paw volume in milliliters was subtracted from the pre-injection paw volume. Data are presented as the percent inhibition of paw swelling in AK inhibitor treated animals, compared to vehicle treated control animals. Rosengren et al., *J. Immunology* 154: 5444-51 (1995).

ORAL BIOAVAILABILITY

Oral bioavailability was determined by comparing the dose corrected areas under the plasma-concentration time curve (AUC) to infinity for the each tested compound, given orally and intravenously in dogs.

For each compound, two female beagles were fasted overnight and received an intravenous infusion of test compound in a 10 mg/ml solution of PEG-400 via a cephalic vein. One dog received this solution at an infusion rate of 0.1 mL/min for 20 minutes. The other dog received a 0.2 mL/in infusion for 10 minutes. Heparinized 25 blood was obtained from the other cephalic vein at predetermined time points during the infusion (0 [pre-dose], 5, 10, 15, and 20 minutes for the 20 min. infusion and 0, 5 and 10 minutes for the 10 min. infusion). After the infusion, heparinized blood was obtained at 5, 10, 15, 30, 45 min., and 1, 1.5, 2, 4, 6, 8, and 24 hours post infusion. The plasma 30 was separated within 10 minutes of blood collection and was stored frozen. The plasma concentration of compound was then determined for these IV infusions.

Another two female b agi s also fasted overnight, received 10 mg/kg of compound solution via a stomach tube, followed by a 6 ml rinse of the tube with PEG-400. Blood samples were handled as for the IV experiments, with samples taken at 0 [pre-dose], 15, 30 and 45 minutes and 1, 1.5, 2, 4, 6, 8, and 24 hours after administration. The plasma concentration of compound was determined for this oral 5 administration.

The samples were assayed for intact adenosine kinase inhibitor by high performance liquid chromatography (HPLC). An internal standard was added to each test sample and standard sample. Each was then extracted with 10 volumes of 1% v/v dimethylsulfoxide in acetonitrile. After vigorous vortexing, the mixture was centrifuged 10 and the supernatant was evaporated to dryness under nitrogen at 50 C. The dried residue was reconstituted in mobile phase and the contents were analyzed for the adenosine kinase inhibitor (AKI) on HPLC.

HPLC was performed on a Beckman Ultrasphere C18 reverse phase column (4.6 x 150 mm) eluted isocratically at ambient temperature with a mobile phase 15 of 60-70% methanol at a flow rate of 1.5 ml/min. The eluant was monitored by UV absorbance at 300 nm. Pharmacokinetic parameters were calculated from the plasma concentration vs. time data, using standard non-compartmental methods. Giraldi et al., Pharmacokinetics, 2d ed. Marcel Dekker, NY (1983). After normalization to account for the different amounts of compound given, the oral bioavailability is calculated as the 20 normalized oral AUC divided by the IV AUC x 100%.

Results for representative compounds of the invention are shown in Table 3.

LIVER TOXICITY

10 Female SA rats (150-200 g) were anesthetized with halothane and a chronic catheter was placed in the internal jugular vein. The animals were allowed to recover for 3 days. At this time, 37.5  $\mu$ mole/kg of an AK inhibitor was dissolved in 75% PEG400 and infused through the jugular catheter over 40 minutes. Twelve hours later, an additional 37.5  $\mu$ mole/kg was infused over 40 minutes (total dose = 75  $\mu$ mole/kg).

15 Twelve hours after the second dose, the animals were anesthetized with halothane and exsanguinated through the descending aorta. Liver enzymes (serum glutamic-oxaloacetic transaminase (SGOT), serum glutamic-pyruvic transaminase (SGPT), alkaline phosphatase) and total bilirubin in the serum samples were determined by a commercial laboratory. Results are shown in Table 4.

#### FORMULATIONS

Compounds of the invention are administered to the affected tissue at the rate of from 0.1 to 200 nmole/min/kg, preferably from 1 to 50 nmol/min/kg. Such rates are easily maintained when soluble compounds are intravenously administered as discussed below. When other methods are used (e.g., oral administration), use of time-release preparations to control the rate of release of the active ingredient may be preferred. These compounds are administered in a dose of about 0.01 mg/kg/day to about 100 mg/kg/day, preferably from about 0.1 mg/kg/day to about 10 mg/kg/day.

For the purposes of this invention, the compounds of the invention may be administered by a variety of means including orally, parenterally, by inhalation spray, topically, or rectally in formulations containing conventional non-toxic pharmaceutically acceptable carriers, adjuvants and vehicles. The term parenteral as used herein includes subcutaneous, intravenous, intramuscular, and intraarterial injections with a variety of infusion techniques. Intraarterial and intravenous injection as used herein includes administration through catheters. Preferred for certain indications are methods of administration which allow rapid access to the tissue or organ being treated, such as intravenous injections for the treatment of myocardial infarction. When an organ outside a body is being treated, perfusion is preferred.

Pharmaceutical compositions containing the active ingredient may be in any form suitable for the intended method of administration. When used for oral use for

example, tablets, troches, lozenges, aqueous or oil suspensions, dispersible powders or granules, emulsions, hard or soft capsules, syrups or elixirs may be prepared. Compositions intended for oral use may be prepared according to any method known to the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents including those from the group consisting of 5 sweetening agents, flavoring agents, coloring agents and preserving agents, in order to provide a palatable preparation. Tablets containing the active ingredient in admixture with non-toxic pharmaceutically acceptable excipient which are suitable for manufacture of tablets are acceptable. These excipients may be, for example, inert diluents, such as calcium carbonate, sodium carbonate, lactose, calcium phosphate or sodium 10 phosphate; granulating and disintegrating agents, such as maize starch, or alginic acid; binding agents, such as starch, gelatin or acacia; and lubricating agents, such as magnesium stearate, stearic acid or talc. Tablets may be uncoated or may be coated by known techniques including microencapsulation to delay disintegration and adsorption in the gastrointestinal tract and thereby provide a sustained action over a 15 longer period. For example, a time delay material such as glyceryl monostearate or glyceryl distearate alone or with a wax may be employed.

Formulations for oral use may be also presented as hard gelatin capsules wherein the active ingredient is mixed with an inert solid diluent, for example calcium phosphate or kaolin, or as soft gelatin capsules wherein the active ingredient is mixed 20 with water or an oil medium, such as peanut oil, liquid paraffin or olive oil.

Aqueous suspensions of the invention contain the active materials in admixture with excipients suitable for the manufacture of aqueous suspensions. Such excipients include a suspending agent, such as sodium carboxymethylcellulose, methylcellulose, hydroxypropylmethylcellulose, sodium alginate, polyvinylpyrrolidone, 25 gum tragacanth and gum acacia, and dispersing or wetting agents such as a naturally occurring phosphatide (e.g., lecithin), a condensation product of an alkylene oxide with a fatty acid (e.g., polyoxyethylene stearate), a condensation product of ethylene oxide with a long chain aliphatic alcohol (e.g., heptadecaethyleneoxycetanol), a condensation product of ethylene oxide with a partial ester derived from a fatty acid and a hexitol 30 anhydride (e.g., polyoxyethylene sorbitan mono-oleate). The aqueous suspension may also contain one or more preservative such as ethyl or n-propyl p-hydroxybenzoate, one

or more coloring agent, one or more flavoring agent and one or more sweetening agent, such as sucrose or saccharin.

Oil suspensions may be formulated by suspending the active ingredient in a vegetable oil, such as arachis oil, olive oil, sesame oil or coconut oil, or in a mineral oil such as liquid paraffin. The oral suspensions may contain a thickening agent, such as beeswax, hard paraffin or cetyl alcohol. Sweetening agents, such as those set forth above, and flavoring agents may be added to provide a palatable oral preparation. These compositions may be preserved by the addition of an antioxidant such as ascorbic acid.

Dispersible powders and granules of the invention suitable for preparation of an aqueous suspension by the addition of water provide the active ingredient in admixture with a dispersing or wetting agent, a suspending agent, and one or more preservatives. Suitable dispersing or wetting agents and suspending agents are exemplified by those disclosed above. Additional excipients, for example sweetening, flavoring and coloring agents, may also be present.

The pharmaceutical compositions of the invention may also be in the form of oil-in-water emulsions. The oily phase may be a vegetable oil, such as olive oil or arachis oil, a mineral oil, such as liquid paraffin, or a mixture of these. Suitable emulsifying agents include naturally-occurring gums, such as gum acacia and gum tragacanth, naturally occurring phosphatides, such as soybean lecithin, esters or partial esters derived from fatty acids and hexitol anhydrides, such as sorbitan mono-oleate, and condensation products of these partial esters with ethylene oxide, such as polyoxyethylene sorbitan mono-oleate. The emulsion may also contain sweetening and flavoring agents.

Syrups and elixirs may be formulated with sweetening agents, such as glycerol, sorbitol or sucrose. Such formulations may also contain a demulcent, a preservative, a flavoring or a coloring agent.

The pharmaceutical compositions of the invention may be in the form of a sterile injectable preparation, such as a sterile injectable aqueous or oleaginous suspension. This suspension may be formulated according to the known art using those suitable dispersing or wetting agents and suspending agents which have been mentioned above. The sterile injectable preparation may also be a sterile injectable solution or suspension in a non-toxic parenterally-acceptable diluent or solvent, such

as a solution in 1,3-butanediol or prepared as a lyophilized powder. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution and isotonic sodium chloride solution. In addition, sterile fixed oils may conventionally be employed as a solvent or suspending medium. For this purpose any bland fixed oil may be employed including synthetic mono- or diglycerides. In addition, fatty acids such as 5 oleic acid may likewise be used in the preparation of injectables.

The amount of active ingredient that may be combined with the carrier material to produce a single dosage form will vary depending upon the host treated and the particular mode of administration. For example, a time-release formulation intended for oral administration to humans may contain 20 to 1000  $\mu$ moles of active material 10 compounded with an appropriate and convenient amount of carrier material which may vary from about 5 to about 95% of the total compositions. It is preferred that pharmaceutical composition be prepared which provides easily measurable amounts for administration. For example, an aqueous solution intended for intravenous infusion should contain from about 0.1 to about 15  $\mu$ moles of the active ingredient per milliliter 15 of solution in order that infusion of a suitable volume at a rate of about 30 mL /hr can occur.

As noted above, formulations of the present invention suitable for oral administration may be presented as discrete units such as capsules, cachets or tablets each containing a predetermined amount of the active ingredient; as a powder or 20 granules; as a solution or a suspension in an aqueous or non-aqueous liquid; or as an oil-in-water liquid emulsion or a water-in-oil liquid emulsion. The active ingredient may also be administered as a bolus, electuary or paste.

A tablet may be made by compression or molding, optionally with one or more accessory ingredients. Compressed tablets may be prepared by compressing in 25 a suitable machine the active ingredient in a free-flowing form such as a powder or granules, optionally mixed with a binder (e.g., povidone, gelatin, hydroxypropylmethyl cellulose), lubricant, inert diluent, preservative, disintegrant (e.g., sodium starch glycolate, cross-linked povidone, cross-linked sodium carboxymethyl cellulose) surface-active or dispersing agent. Molded tablets may be made by molding in a suitable 30 machine a mixture of the powdered compound moistened with an inert liquid diluent. The tablets may optionally be coated or scored and may be formulated so as to provide slow or controlled release of the active ingredient therein using, for example,

hydroxypropylmethyl cellulose in varying proportions to provide the desired release profile. Tablets may optionally be provided with an enteric coating, to provide release in parts of the gut other than the stomach. This is particularly advantageous with the compounds of formula (I) as such compounds are susceptible to acid hydrolysis.

Formulations suitable for topical administration in the mouth include 5 lozenges comprising the active ingredient in a flavored basis, usually sucrose and acacia or tragacanth; pastilles comprising the active ingredient in an inert basis such as gelatin and glycerin, or sucrose and acacia; and mouthwashes comprising the active ingredient in a suitable liquid carrier. Formulations for rectal administration may be presented as a suppository with a suitable base comprising for example cocoa butter 10 or a salicylate.

Formulations suitable for vaginal administration may be presented as pessaries, tampons, creams, gels, pastes, foams or spray formulations containing in addition to the ddPN ingredient such carriers as are known in the art to be appropriate.

Formulations suitable for parenteral administration include aqueous and 15 non-aqueous isotonic sterile injection solutions which may contain anti-oxidants, buffers, bacteriostats and solutes which render the formulation isotonic with the blood of the intended recipient; and aqueous and non-aqueous sterile suspensions which may include suspending agents and thickening agents. The formulations may be presented in unit-dose or multi-dose sealed containers, for example, ampoules and vials, and may 20 be sorted in a freeze-dried (lyophilized) condition requiring only the addition of the sterile liquid carrier, for example water for injections, immediately prior to use. Extemporaneous injection solutions and suspensions may be prepared from sterile powders, granules and tablets of the kind previously described.

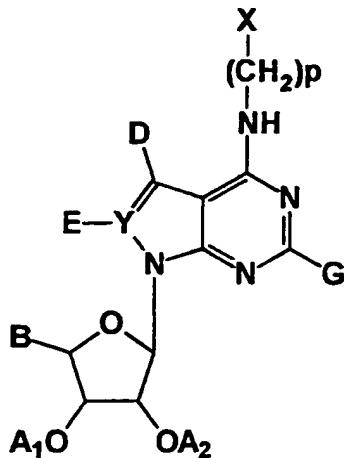

Preferred unit dosage formulations are those containing a daily dose or 25 unit, daily sub-dose, or an appropriate fraction thereof, of an adenosine kinase inhibitor compound. It will be understood, however, that the specific dose level for any particular patient will depend on a variety of factors including the activity of the specific compound employed; the age, body weight, general health, sex and diet of the individual being treated; the time and route of administration; the rate of excretion; other drugs which 30 have previously been administered; and the severity of the particular disease undergoing therapy, as is well understood by those skilled in the art.

Capsules comprising adenosine kinase inhibitors suitable for oral administration according to the methods of the present invention may be prepared as follows: (1) for a 10,000 capsule preparation: 1500 g of adenosine kinase inhibitor is blended with other ingredients (as described above) and filled into capsules which are suitable for administration depending on dose, from about 4 capsules per day (1 per 6 hours) to about 8 capsules per day (2 capsules per 6 hours), to an adult human.

The compounds of this invention and their preparation and use can be understood further by the representative examples above, which illustrate the various aspects of the invention without limiting its scope.

**WE CLAIM:**

1. A compound according to the formula

wherein:

A<sub>1</sub> and A<sub>2</sub> are each independently hydrogen, acyl, or taken together form a cyclic carbonate;

B is alkenyl, or (CH<sub>2</sub>)<sub>n</sub>-B', where n is from 1 to 4 and B' is hydrogen, hydroxy, alkyl, alkoxy, amino, azido, or halogen;

D is halogen, alkyl, alkenyl, aryl, aralkyl, alkynyl, haloalkyl, cyano, or carboxamido;

Y is carbon or nitrogen;

E is nothing when Y is nitrogen, and is hydrogen, halogen or alkyl when Y is carbon;

G is hydrogen or halogen;

p is from 0 to 3;

and X is a five or six member aryl ring, optionally substituted at any one or more positions by hydroxy, amino, alkyl, alkoxy, per halo lower alkyl, sulfonamide, halogen, cyano, or CONRR', NRCOR', NRR', or SR where R and R' are independently hydrogen or lower alkyl;

and pharmaceutically acceptable salts thereof.

2. A compound of claim 1, where X is a six-membered ring.

3. A compound of claim 1, where X is a six-membered ring, substituted in the para position.
4. A compound of claim 3, where X is phenyl, substituted in the para position by a halogen.
5. A compound of claim 4, where the halogen is fluorine.
6. A compound of claim 1, where X is a six-membered ring and D is aryl.
7. A compound of claim 1, where X is substituted phenyl and D is aryl.
8. A compound of claim 1, where X is phenyl substituted at the para position and D is aryl.
9. A compound of claim 1, where X is phenyl substituted at the para position by halogen, and D is aryl.
10. A compound of claim 9, where the halogen is fluorine and D is optionally substituted phenyl.
11. A compound of claim 1, where G and each A is hydrogen.
12. A compound of claim 11, where X is a six-membered ring.
13. A compound of claim 11, where X is a six-membered ring substituted at the para position.
14. A compound of claim 13, where X is phenyl substituted at the para position by halogen.
15. A compound of claim 14, where D is aryl.

16. A compound of claim 15, where p is 0, D is phenyl and the halogen is fluorine.

17. A compound of claim 1, where G and each A is hydrogen and B is one of CH<sub>3</sub> and CH<sub>2</sub>OH.

18. A compound of claim 17, where X is a six-membered ring.

19. A compound of claim 17, where X is a six-membered ring substituted at the para position.

20. A compound of claim 19, where X is phenyl substituted at the para position by halogen.

21. A compound of claim 20, where D is aryl.

22. A compound of claim 21, where D is phenyl and the halogen is fluorine.

23. A compound of claim 1, where Y is carbon.

24. A compound of claim 1, where Y is carbon and E is hydrogen.

25. A compound of claim 1, where Y is carbon, and E, G and each A are hydrogen.

26. A compound of claim 25, where X is a six-membered ring.

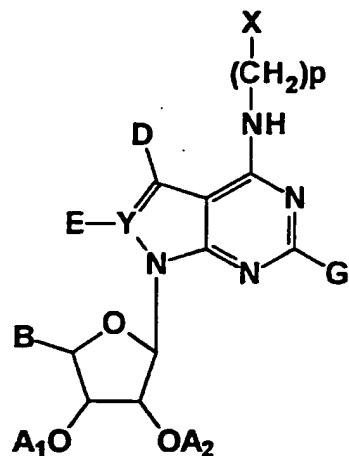

27. A compound of claim 25, where X is a six-membered ring substituted at the para position.

28. A compound of claim 27, where X is phenyl substituted at the para position by halogen.

29. A compound of claim 28, where D is aryl.

30. A compound of claim 29, where D is phenyl and the halogen is fluorine.

31. A compound according to the formula

wherein:

A<sub>1</sub> and A<sub>2</sub> are hydrogen;

B is (CH<sub>2</sub>)<sub>n</sub>-B' where n is from 1 to 2 and B' is hydrogen, hydroxy, alkoxy or amino;

D is halogen or aryl;

Y is carbon or nitrogen;

E is nothing when Y is nitrogen, and is hydrogen or halogen when Y is carbon;

G is hydrogen or halogen;

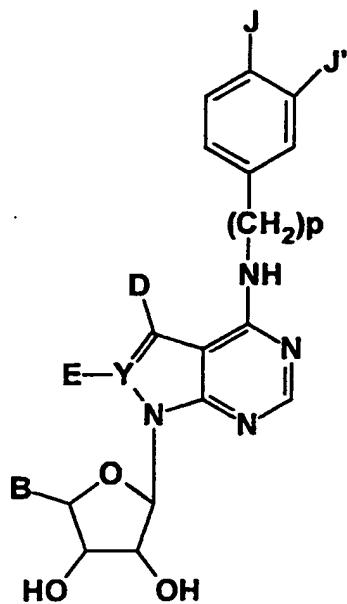

p is from 0 to 1;

and X is a five or six member aryl ring, optionally substituted at any one or more positions by alkyl, alkoxy, perhalo lower alkyl, sulfonamide, halogen, cyano, carboxamido, acylamino, NRR', or SR where R and R' are independently hydrogen or lower alkyl;

and pharmaceutically acceptable salts thereof.

32. A compound of claim 31, where Y is carbon.
33. A compound of claim 32, where E, G, and each A are hydrogen.
34. A compound of claim 33, where B is methyl.
35. A compound of claim 32, where p is 0 and X is a six-membered ring substituted at the para position.
36. A compound of claim 32, where D is aryl.
37. A compound of claim 32, where D is aryl, p is 0, and X is a six-membered ring substituted at the para position.
38. A compound of claim 32, where D is phenyl, p is 0, and X is phenyl substituted at the para position by a halogen.
39. A compound of claim 38, where the halogen is fluorine.
40. A compound of claim 31, where Y is nitrogen.
41. A compound of claim 40, where G and each A are hydrogen.
42. A compound of claim 40, where D is aryl.
43. A compound of claim 40, where D is aryl, and G and each A are hydrogen.
44. A compound of claim 43, where p is 0.
45. A compound of claim 44, where D is phenyl and X is a six-membered ring substituted at the para position with halogen.

## 46. A compound of the formula

wherein

B is  $\text{CH}_2\text{OH}$ , or  $\text{CH}_3$ ;

D is a five or six-membered ring;

E is nothing when Y is nitrogen and is hydrogen or halogen when Y is carbon;

Y is carbon or nitrogen;

and J and J' are independently halogen, hydrogen, cyano, alkoxy, alkyl, amino, carboxamido, acylamino, or  $\text{SR}$ , where R is hydrogen or lower alkyl.

47. A compound of claim 46 where B is  $\text{CH}_3$ .

48. A compound of claim 46 where Y is nitrogen.

49. A compound of claim 46 where Y is carbon.

50. A compound of claim 49 where D is phenyl.

51. A compound of claim 1 where X is a six membered ring p is 0 or 1.

52. A compound of claim 1, where D is aryl or halogen.

53. A compound of claim 1 where D is aryl.
54. A compound of claim 53 where D is substituted phenyl.
55. A compound of claim 46, where each J is independently halogen or hydrogen.
56. A compound of claim 50, where J is fluoro, J' and E are hydrogen, and B is methyl.
57. A compound of claim 49, where D is parafluorophenyl, J is fluoro, J' and E are hydrogen, and B is methyl.
58. A compound of claim 50 where J is ethoxy, J' and E are hydrogen and B is methyl.
59. A compound of claim 49 where D is 4-methoxyphenyl, J is fluoro, J' and E are hydrogen and B is methyl.
60. A compound of claim 49 where D is 3-aminophenyl, J is fluoro, J' and E are hydrogen and B is methyl.

## INTERNATIONAL SEARCH REPORT

International Application No PCT/US 96/10919
---

A. CLASSIFICATION OF SUBJECT MATTER IPC 6 C07H19/14 C07H19/23 A61K31/70
--

According to International Patent Classification (IPC) or to both national classification and IPC
---

B. FIELDS SEARCHED
--------------------

Minimum documentation searched (classification system followed by classification symbols)
---

IPC 6 C07H A61K
-----------------

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
---

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)
--

C. DOCUMENTS CONSIDERED TO BE RELEVANT
--

Category	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 94 18215 A (GENSIA, INC.;USA) 18 August 1994 see the whole document -----	1-60
X	WO 94 17803 A (GENSIA, INC.;USA) 18 August 1994 see the whole document -----	1-60

\* Special categories of cited documents :

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the international filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the international filing date but later than the priority date claimed

- \*T\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- \*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- \*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- \*&\* document member of the same patent family
